(54) **Organic light emitting display and method of fabricating the same**

(57) Provided are an organic light emitting display and a method of fabricating the same that are capable of preventing an element from being damaged due to a large amount of heat generated when the laser irradiates a glass frit for sealing a substrate. The organic light emitting display includes: a first substrate (300) comprising a pixel region (I) and a non-pixel region (II); an array of organic light emitting pixels formed over the pixel region; a conductive line (360d) formed over the non-pixel re-

gion; a second substrate (420) placed over the first substrate such that the array and the conductive line are interposed between the first and second substrates; and a frit seal interposed between the first and second substrates and surrounding the array, the frit seal (430) interconnecting the first and second substrates, the frit seal comprising a portion overlapping the conductive line, wherein when viewed from the second substrate, the portion of the frit seal substantially eclipses the conductive line.

摘要(译)

本发明提供一种有机发光显示器及其制造方法，其能够防止元件在激光照射用于密封基板的玻璃料时产生的大量热量而被损坏。有机发光显示器包括：第一基板（300），包括像素区域（I）和非像素区域（II）；在像素区域上形成的有机发光像素阵列；形成在非像素区域上方的导线（360d）；第二基板（420）放置在第一基板上，使得阵列和导线插入第一和第二基板之间；和玻璃料密封件插入在第一和第二基板之间并围绕阵列，玻璃料密封件（430）互连第一和第二基板，玻璃料密封件包括与导电线重叠的部分，其中当从第二基板观察时，该部分玻璃料密封件的基本上遮盖了导电线。
