(54) **Organic light emitting diode display and method of manufacturing the same**

(57) An organic light emitting diode display and a method of manufacturing the display, the organic light emitting diode display including: a substrate; a semiconductor layer formed on the substrate, having a channel region, a source region, and a drain region; a gate insulating layer covering the semiconductor layer; a gate electrode formed on the channel region; and an interlayer insulating layer covering the gate electrode. Source and

drain electrodes are formed on the interlayer insulating layer, and are connected to the source and drain regions, respectively. A pixel electrode extends from the drain electrode, in the same plane as the source and drain electrodes. The source and drain electrodes each have a first conductive layer formed of a transparent conductive material, and a metallic second conductive layer formed on the first conductive layer. The pixel electrode is formed from the first conductive layer.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 10 15 1977

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
