(54) **ORGANIC LIGHT EMITTING DISPLAY DEVICE**

(57) Disclosed is an organic light emitting display device for reducing a color defect or a color difference which occurs in the front or side of the organic light emitting display device. The organic light emitting display device includes a first electrode, a second electrode and an organic layer between the first electrode and the second

electrode, the organic layer including at least one emission part. The organic layer is configured for a peak wavelength of an electroluminescence (EL) spectrum of the organic light emitting display device emitted from the at least one emission part to have a range from 10nm less to 10nm more than a predetermined peak wavelength.

FIG. 12

**DECLARATION**

Application Number

which under Rule 63 of the European Patent Convention EP 15 19 4508 shall be considered, for the purposes of subsequent proceedings, as the European search report

The Search Division considers that the present application, does not comply with the provisions of the EPC to such an extent that it is not possible to carry out a meaningful search into the state of the art on the basis of all claims

Reason:

The claims are not clear because the feature "a desired peak wavelength" does not limit the definition of the claim (Article 84 EPC). The resultant wavelength may always be defined to be the desired one.

Moreover, present claim 1 relates to a product which has a given desired property or effect, namely of not changing the spectral wavelength of a pixel even if the thickness and/or the dopant concentration in a light emitting layer were changed. However, the description does not provide support and disclosure within the meaning of Articles 84 and 83 EPC for any such product having the said property or effect and there is no common general knowledge of this kind available to the person skilled in the art. This non-compliance with the substantive provisions is such that a meaningful search of the whole claimed subject-matter of the claim could not be carried out (Rule 63 EPC and Guidelines B-VIII, 3).

The applicant's attention is drawn to the fact that a search may be carried out during examination following a declaration of no search under Rule 63 EPC, should the problems which led to the declaration being issued be overcome (see EPC Guideline C-IV, 7.2).

摘要(译)

公开了一种用于减少在有机发光显示装置的正面或侧面中发生的颜色缺陷或色差的有机发光显示装置。有机发光显示装置包括第一电极，第二电极和在第一电极和第二电极之间的有机层，有机层包括至少一个发光部分。有机层被配置用于从至少一个发射部分发射的有机发光显示装置的电致发光 (EL) 光谱的峰值波长，其具有比预定峰值波长长10nm至10nm的范围。
