(54) **ELECTROLUMINESCENT DISPLAY DEVICE**

(57) Disclosed is an electroluminescent display device comprising a substrate (100), a circuit device layer (200) including a signal line (VDD, VSS) on the substrate (100), a bank (400) defining a first emission area (E1) and a second emission area (E2) on the circuit device layer (200), and a first emission layer (510) in the first emission

area (E1), and a second emission layer (510) in the second emission area (E2), wherein the first emission area (E1) is overlapped with the signal line (VDD, VSS), and a width of the first emission area (E1) is the same as or less than a width of the signal line (VDD, VSS).

EPO FORM 1503 03.82 (P04E07)

INCOMPLETE SEARCH SHEET C

Application Number

EP 18 21 3425

Claim(s) completely searchable:
6-11

Claim(s) not searched:
1-5, 12-15

Reason for the limitation of the search:

The present application contains 15 claims, of which 3 are independent. There is no clear distinction between the independent claims because of overlapping scope. There are so many claims and they are drafted in such a way that the claims as a whole do not comply with the provisions of clarity and conciseness in Article 84 EPC, as it is particularly burdensome for a skilled person to establish the subject-matter for which protection is sought. Non-compliance with the substantive provisions is such that a meaningful search of the whole claimed subject-matter could/can not be carried out (Rule 63 EPC and Guidelines B-VIII, 3). Furthermore, the application lacks unity within the meaning of Article 82 EPC.

The common matter linking together the independent claims 1, 6, 12 are the following:

An electroluminescent display device comprising a substrate, a circuit device layer, a bank defining a first and a second emission area with first and second emission layers.

This common matter does not comprise a single general inventive concept, based on same or corresponding special technical features, because any electroluminescent display device comprises these common features (see e.g. US2016079323, fig. 3, para. 53, 73).

Hence, the following separate inventions are not so linked as to form a single general inventive concept:

Remaining features of claim 1:

a signal line having a first width, the first emission area being overlapped with the signal line, the width of the first emission area being the same or less than the width of the signal line.

Remaining features of claim 6:

a high level power line and a low level power line, a plurality of device columns including a plurality of TFTs between the high level power line and the low level power line, the emission areas E1, E2 and E3 overlapping the power lines and the circuit device columns, wherein the first emission area E1 overlaps with at least one of the high and the low level power line, the width of the first emission area being the same or less than the width of the high power line or the low power line.

Remaining features of claim 12:

First, second and third circuit device columns, first, second and third anodes in the first, second and third emission areas, a switching TFT and a driving TFT, the first anode overlapping with the first emission area E1 and being connected to the driving TFT in the first or third circuit device column, the first emission area E1 not overlapping with the first and third circuit device columns.

While the remaining features of claim 1 concern the disposition and width of the signal line, the remaining features of claims 6 and 12 relate to the arrangement and width of the power lines (claim 6) and of the TFTs and anodes (claim 12).

The remaining features therefore concern completely different components

of the electroluminescent display and hence, there is not technical relationship between these remaining technical features.
As the claims comprise neither the same, nor corresponding special technical features, the technical relationship between the subject matter of the claims required by Rule 44 EPC is lacking and the claims are not so linked as to form a single general inventive concept. The application does not fulfil the requirement for unity of invention in the sense of Article 82 EPC.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 18 21 3425

5 This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.

摘要(译)

公开了一种电致发光显示装置，其包括基板（100），在基板（100）上包括信号线（VDD，VSS）的电路装置层（200），限定第一发射区（E1）的堤（400）和电路器件层（200）上的第二发射区（E2），第一发射区（E1）中的第一发射层（510），第二发射区（E2）中的第二发射层（510），其中，第一发射区（E1）与信号线（VDD，VSS）重叠，并且第一发射区（E1）的宽度等于或小于信号线（VDD，VSS）的宽度。
