HETEROCYCLIC COMPOUND AND ORGANIC LIGHT-EMITTING ELEMENT COMPRISING SAME

[Formula 1]

TECHNICAL FIELD

[0001] The present specification claims priority to and the benefit of Korean Patent Application No. 10-2014-0040818, filed in the Korean Intellectual Property Office on Apr. 4, 2014, Korean Patent Application No. 10-2015-0017929, filed in the Korean Intellectual Property Office on Feb. 5, 2015, and Korean Patent Application No. 10-2015-0045578, filed in the Korean Intellectual Property Office on Mar. 31, 2015, the contents of which are incorporated herein by reference in their entireties.

[0002] The present specification relates to a hetero-cyclic compound and an organic light emitting device comprising the same.

BACKGROUND ART

[0003] In general, an organic light emitting phenomenon refers to a phenomenon in which electric energy is converted into light energy by using an organic material. An organic light emitting device using the organic light emitting phenomenon usually has a structure including a positive electrode, a negative electrode, and an organic material layer interposed therebetween. Here, the organic material layer may have a multilayered structure composed of different materials in order to improve the efficiency and stability of an organic light emitting device in many cases, and for example, may be composed of a hole injection layer, a hole transporting layer, a light emitting layer, an electron transporting layer, an electron injection layer, and the like. In the structure of the organic light emitting device, if a voltage is applied between two electrodes, holes are injected from a positive electrode into the organic material layer and electrons are injected from a negative electrode into the organic material layer, and when the injected holes and electrons meet each other, an exciton is formed, and light is emitted when the exciton falls down again to a ground state.

[0004] There is a continuous need for developing a new material for the aforementioned organic light emitting device.

DISCLOSURE

Technical Problem

[0006] The present specification describes a hetero-cyclic compound and an organic light emitting device comprising the same.

Technical Solution

[0007] An exemplary embodiment of the present specification provides a compound represented by the following Formula 1:

[0008] in Formula 1,

[0009] Ar1 and Ar2 are the same as each other, and a substituted or unsubstituted aryl group,

[0010] L is a substituted or unsubstituted naphthylene; a substituted or unsubstituted phenanthrylene; or a substituted or unsubstituted fluorenylene,

[0011] R1 and R2 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthioxy group; a substituted or unsubstituted arylthioxy group; a substituted or unsubstituted alkylsulfoxy group; a substituted or unsubstituted arylsulfoxy group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkylaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; a substituted or unsubstituted phosphineoxide group; a substituted or unsubstituted aryl group; or a substituted or unsubstituted hetero-cyclic group, or may combine with an adjacent group to form a substituted or unsubstituted ring,

[0012] R3 and R4 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthioxy group; a substituted or unsubstituted arylthioxy group; a substituted or unsubstituted alkylsulfoxy group; a substituted or unsubstituted arylsulfoxy group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkylaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; a substituted or unsubstituted phosphineoxide group; a substituted or unsubstituted aryl group; or a substituted or unsubstituted hetero-cyclic group, or may combine with an adjacent group to form a substituted or unsubstituted ring,

substituted or unsubstituted arylphosphine group; a substituted or unsubstituted phosphineoxide group; a substituted or unsubstituted aryl group; or a substituted or unsubstituted hetero-cyclic group, or may combine with an adjacent group to form a substituted or unsubstituted ring.

[0013] m is an integer of 1 to 5,

[0014] a is an integer of 0 to 3, and

[0015] b is an integer of 0 to 4, and

[0016] when m, a, and b are each 2 or more, the structures in the parenthesis are the same as or different from each other.

[0017] Further, an exemplary embodiment of the present specification provides: an organic light emitting device including: a first electrode; a second electrode provided to face the first electrode; and one or more organic material layers provided between the first electrode and the second electrode, in which one or more of the organic material layers includes the compound of Formula 1.

Advantageous Effects

[0018] The compound described in the present specification may be used as a material for the organic material layer of the organic light emitting device. The compound according to at least one exemplary embodiment may improve the efficiency and improve low driving voltage and/or service life characteristics in the organic light emitting device. In particular, the compound described in the present specification may be used as a material for hole injection, hole transport, hole injection and hole transport, light emission, electron transport, or electron injection. In addition, the compound described in the present specification may be used preferably as a material for a light emitting layer, electron transport, or electron injection, and more preferably as a material for electron transport or electron injection.

DESCRIPTION OF DRAWINGS

[0019] FIG. 1 illustrates an example of an organic light emitting device composed of a substrate 1, a positive electrode 2, a light emitting layer 3, and a negative electrode 4.

[0020] FIG. 2 illustrates an example of an organic light emitting device composed of a substrate 1, a positive electrode 2, a hole injection layer 5, a hole transporting layer 6, a light emitting layer 7, an electron transporting layer 8, and a negative electrode 4.

[0021] FIG. 3 illustrates an MS data result of Compound 1 prepared in the Examples.

MODE FOR INVENTION

[0022] Hereinafter, the present specification will be described in more detail.

[0023] An exemplary embodiment of the present specification provides the compound represented by Formula 1.

[0024] Examples of the substituents will be described below, but are not limited thereto.

[0025] In the present specification, the term “substituted or unsubstituted” means that a group is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a phosphine oxide group; an alkoxy group; an aryloxy group; an alkylthioxy group; an arylthioxy group; an alkylsulfoxy group; an arylsulfoxy group; a silyl group; a boron group; an alkyl

group; a cycloalkyl group; an alkenyl group; an aryl group; an aralkyl group; an aralkenyl group; an alkylaryl group; an alkylamine group; an aralkylamine group; a heteroarylamine group; an arylamine group; an arylphosphine group; and a hetero-cyclic group, or a substituent to which two or more substituents among the substituents exemplified above are linked is substituted or unsubstituted. For example, “the substituent to which two or more substituents are linked” may be a biphenyl group. That is, the biphenyl group may also be an aryl group, and may be interpreted as a substituent to which two phenyl groups are linked.

[0026] According to an exemplary embodiment of the present specification, the term “substituted or unsubstituted” may preferably mean that a group is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium; an alkyl group; an alkoxy group; and an aryl group.

[0027] According to an exemplary embodiment of the present specification, the compound represented by Formula 1 may be unsubstituted or substituted with at least one deuterium. Further, according to an exemplary embodiment of the present specification, a substituent of the compound represented by Formula 1 may be unsubstituted or substituted with at least one deuterium.

[0028] In the present specification, the “adjacent” group may mean a substituent substituted with an atom directly linked to an atom in which the corresponding substituent is substituted, a substituent disposed sterically closest to the corresponding substituent, or another substituent substituted with an atom in which the corresponding substituent is substituted. For example, two substituents substituted at the ortho position in a benzene ring and two substituents substituted with the same carbon in an aliphatic ring may be interpreted as groups which are “adjacent” to each other.

[0029] In the present specification, the number of carbon atoms of the carbonyl group is not particularly limited, but is preferably 1 to 40. Specifically, the carbonyl group may be a compound having the following structure, but is not limited thereto.

[0030] In the present specification, in the ester group, the oxygen of the ester group may be substituted with a straight-chained, branched, or cyclic alkyl group having 1 to 25 carbon atoms, or an aryl group having 6 to 25 carbon atoms. Specifically, the ester group may be a compound having the following structure, but is not limited thereto.

[0031] In the present specification, the number of carbon atoms of the imide group is not particularly limited, but is preferably 1 to 25. Specifically, the imide group may be a compound having the following structure, but is not limited thereto.

[0032] In the present specification, the silyl group may be represented by a formula of $-\text{SiRR}'\text{R}''$, and R, R', and R'' may be each hydrogen; a substituted or unsubstituted alkyl group; or a substituted or unsubstituted aryl group. Specific examples of the silyl group include a trimethylsilyl group, a triethylsilyl group, a t-butyltrimethylsilyl group, a vinyltrimethylsilyl group, a propyltrimethylsilyl group, a triphenylsilyl group, a diphenylsilyl group, a phenylsilyl group, and the like, but are not limited thereto.

[0033] In the present specification, the boron group may be represented by a formula of $-\text{BRR}'\text{R}''$, and R, R', and R'' may be each hydrogen; a substituted or unsubstituted alkyl group; or a substituted or unsubstituted aryl group. Specific examples of the boron group include a trimethylboron group, a triethylboron group, a t-butyltrimethylboron group, a triphenylboron group, a phenylboron group, and the like, but are not limited thereto.

[0034] In the present specification, examples of the halogen group include fluorine, chlorine, bromine or iodine.

[0035] In the present specification, the alkyl group may be straight-chained or branched, and the number of carbon atoms thereof is not particularly limited, but is preferably 1 to 40. According to an exemplary embodiment, the number of carbon atoms of the alkyl group is 1 to 20. According to another exemplary embodiment, the number of carbon atoms of the alkyl group is 1 to 10. According to still another exemplary embodiment, the number of carbon atoms of the alkyl group is 1 to 6. Specific examples of the alkyl group include methyl, ethyl, propyl, n-propyl, isopropyl, butyl, n-butyl, isobutyl, tert-butyl, sec-butyl, 1-methyl-butyl, 1-ethyl-butyl, pentyl, n-pentyl, isopentyl, neopentyl, tert-pentyl, hexyl, n-hexyl, 1-methylpentyl, 2-methylpentyl, 4-methyl-2-pentyl, 3,3-dimethylbutyl, 2-ethylbutyl, heptyl, n-heptyl, 1-methylhexyl, cyclopentylmethyl, cyclohexylmethyl, octyl, n-octyl, tert-octyl, 1-methylheptyl, 2-ethylhexyl, 2-propylpentyl, n-nonyl, 2,2-dimethylheptyl, 1-ethylpropyl, 1,1-dimethyl-propyl, isohexyl, 4-methylhexyl, 5-methylhexyl, and the like, but are not limited thereto.

[0036] In the present specification, the alkenyl group may be straight-chained or branched, and the number of carbon atoms thereof is not particularly limited, but is preferably 2 to 40. According to an exemplary embodiment, the number of carbon atoms of the alkenyl group is 2 to 20. According to another exemplary embodiment, the number of carbon atoms of the alkenyl group is 2 to 10. According to still another exemplary embodiment, the number of carbon atoms of the alkenyl group is 2 to 6. Specific examples thereof include vinyl, 1-propenyl, isopropenyl, 1-butenyl, 2-butenyl, 3-butenyl, 1-pentenyl, 2-pentenyl, 3-pentenyl, 3-methyl-1-butenyl, 1,3-butadienyl, allyl, 1-phenylvinyl-1-yl, 2-phenylvinyl-1-yl, 2,2-diphenylvinyl-1-yl, 2-phenyl-2-(naphthyl-1-yl)vinyl-1-yl, 2,2-bis(diphenyl-1-yl)vinyl-1-yl, a stilbenyl group, a styrenyl group, and the like, but are not limited thereto.

[0037] In the present specification, the cycloalkyl group is not particularly limited, but has preferably 3 to 60 carbon atoms, and according to an exemplary embodiment, the number of carbon atoms of the cycloalkyl group is 3 to 30. According to yet another exemplary embodiment, the number of carbon atoms of the cycloalkyl group is 3 to 20. According to still yet another exemplary embodiment, the number of carbon atoms of the cycloalkyl group is 3 to 6. Specific examples thereof include cyclopropyl, cyclobutyl, cyclopentyl, 3-methylcyclopentyl, 2,3-dimethylcyclopentyl, cyclohexyl, 3-methylcyclohexyl, 4-methylcyclohexyl, 2,3-dimethylcyclohexyl, 3,4,5-trimethylcyclohexyl, 4-tert-butylcyclohexyl, cycloheptyl, cyclooctyl, and the like, but are not limited thereto.

[0038] In the present specification, examples of the arylamine group include a substituted or unsubstituted monoarylamine group, a substituted or unsubstituted diarylamine group, or a substituted or unsubstituted triarylamine group. The aryl group in the arylamine group may be a monocyclic aryl group or a polycyclic aryl group. The arylamine group including the two or more aryl groups may include a monocyclic aryl group, a polycyclic aryl group, or both a monocyclic aryl group and a polycyclic aryl group.

[0039] Specific examples of the arylamine group include phenylamine, naphthylamine, biphenylamine, anthracenylamine, 3-methyl-phenylamine, 4-methyl-naphthylamine, 2-methyl-biphenylamine, 9-methyl-anthracenylamine, a diphenylamine group, a phenylnaphthylamine group, a

ditolylamine group, a phenyltolylamine group, carbazole, a triphenylamine group, and the like, but are not limited thereto.

[0040] In the present specification, examples of the heteroarylamine group include a substituted or unsubstituted monoheteroarylamine group, a substituted or unsubstituted diheteroarylamine group, or a substituted or unsubstituted triheteroarylamine group. The heteroaryl group in the heteroarylamine group may be a monocyclic hetero-cyclic group or a polycyclic hetero-cyclic group. The heteroarylamine group including the two or more hetero-cyclic groups may include a monocyclic hetero-cyclic group, a polycyclic hetero-cyclic group, or both a monocyclic hetero-cyclic group and a polycyclic hetero-cyclic group. In the present specification, the arylheteroarylamine group means an amine group substituted with an aryl group and a hetero-cyclic group.

[0041] In the present specification, examples of the arylphosphine group include a substituted or unsubstituted monoarylphosphine group, a substituted or unsubstituted diarylphosphine group, or a substituted or unsubstituted triarylphosphine group. The aryl group in the arylphosphine group may be a monocyclic aryl group or a polycyclic aryl group. The arylphosphine group including the two or more aryl groups may include a monocyclic aryl group, a polycyclic aryl group, or both a monocyclic aryl group and a polycyclic aryl group.

[0042] In the present specification, examples of the arylamine group mean a substituted or unsubstituted monocyclic diarylamine group, a substituted or unsubstituted polycyclic diarylamine group, or a substituted or unsubstituted monocyclic and polycyclic diarylamine group.

[0043] In the present specification, the aryl group is not particularly limited, but has preferably 6 to 60 carbon atoms, and may be a monocyclic aryl group or a polycyclic aryl group. According to an exemplary embodiment, the number of carbon atoms of the aryl group is 6 to 30. According to an exemplary embodiment, the number of carbon atoms of the aryl group is 6 to 20. When the aryl group is a monocyclic aryl group, examples of the monocyclic aryl group include a phenyl group, a biphenyl group, a terphenyl group, and the like, but are not limited thereto. Examples of the polycyclic aryl group include a naphthyl group, an anthracenyl group, a phenanthryl group, a pyrenyl group, a perylenyl group, a chrysenyl group, a fluorenyl group, a triphenylene group, and the like, but are not limited thereto.

[0044] In the present specification, the fluorenyl group may be substituted, and two substituents may combine with each other to form a spiro structure.

[0045] When the fluorenyl group is substituted, the fluorenyl group may be

-continued

and the like. However, the fluorenyl group is not limited thereto.

[0046] In the present specification, the hetero-cyclic group is a hetero-cyclic group including one or more of N, O, P, S, Si, and Se as a hetero atom, and the number of carbon atoms thereof is not particularly limited, but is preferably 2 to 60. Examples of the hetero-cyclic group include a thiophene group, a furan group, a pyrrole group, an imidazole group, a triazole group, an oxazole group, an oxadiazole group, a pyridyl group, a bipyridyl group, a pyrimidyl group, a triazine group, a triazole group, an acridyl group, a pyridazine group, a pyrazinyl group, a quinoliny group, a quinazoline group, a quinoxaliny group, a phthalazinyl group, a pyridopyrimidinyl group, a pyridopyrazinyl group, a pyrazinopyrazinyl group, an isoquinoline group, an indole group, a carbazole group, a benzoxazole group, a benzimidazole group, a benzothiazole group, a benzocarbazole group, a benzothiophene group, a dibenzothiophene group, a benzofuran group, a phenanthroline group, a thiazolyl group, an isoxazolyl group, an oxadiazolyl group, a thiadiazolyl group, a benzothiazolyl group, a phenothiazinyl group, a dibenzofuran group, and the like, but are not limited thereto.

[0047] In the present specification, the description on the above-described hetero-cyclic group may be applied to a heteroaryl group except for an aromatic group.

[0048] In the present specification, the description on the above-described aryl group may be applied to an aryl group of an aryloxy group, an arylthioxy group, an arylsulfoxy group, an arylphosphine group, an aralkyl group, an aralkylamine group, an aralkenyl group, an alkylaryl group, an arylamine group, and an arylheteroarylamine group.

[0049] In the present specification, the description on the above-described alkyl group may be applied to an alkyl group of an alkylthioxy group, an alkylsulfoxy group, an aralkyl group, an aralkylamine group, an alkylaryl group, and an alkylamine group.

[0050] In the present specification, the description on the above-described hetero-cyclic group may be applied to a heteroaryl group of a heteroaryl group, a heteroarylamine group, and an arylheteroarylamine group.

[0051] In the present specification, the description on the above-described alkenyl group may be applied to an alkenyl group of an aralkenyl group.

[0052] In the present specification, the description on the above-described aryl group may be applied to an arylene group except for a divalent arylene group.

[0053] In the present specification, the description on the above-described hetero-cyclic group may be applied to a heteroarylene except for a divalent heteroarylene group.

[0054] In the present specification, the meaning of combining with an adjacent group to form a ring means of combining with an adjacent group to form a substituted or unsubstituted aliphatic hydrocarbon ring; a substituted or unsubstituted aromatic hydrocarbon ring; a substituted or

unsubstituted aliphatic hetero ring; a substituted or unsubstituted aromatic hetero ring; and a condensed ring thereof.

[0055] In the present specification, the aliphatic hydrocarbon ring means a ring composed only of carbon and hydrogen atoms as a ring which is not an aromatic group.

[0056] In the present specification, examples of the aromatic hydrocarbon ring include a phenyl group, a naphthyl group, an anthracenyl group, and the like, but are not limited thereto.

[0057] In the present specification, the aliphatic hetero ring means an aliphatic ring including one or more of hetero atoms.

[0058] In the present specification, the aromatic hetero ring means an aromatic ring including one or more of hetero atoms.

[0059] In the present specification, the aliphatic hydrocarbon ring, the aromatic hydrocarbon ring, the aliphatic hetero ring, and the aromatic hetero ring may be monocyclic or polycyclic.

[0060] According to an exemplary embodiment of the present specification, Formula 1 may be represented by any one of the following Formulae 2 to 4.

[Formula 2]

[Formula 3]

[Formula 4]

[0061] In Formulae 2 to 4,

[0062] the definition of Ar1, Ar2, L, R3, R4, a, b, and m is the same as defined in Formula 1,

[0063] the definition of R11, R12, R21, and R22 is the same as the definition of R3 and R4,

[0064] X1 and X2 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthio group; a substituted or unsubstituted arylthio group; a substituted or unsubstituted alkylsulfonyl group; a substituted or unsubstituted arylsulfonyl group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkylaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; or a substituted or unsubstituted phosphineoxide group; or may combine with an adjacent group to form a substituted or unsubstituted ring,

[0065] r11 and r12 are the same as or different from each other, and each independently an integer of 0 to 5,

[0066] r21 and r22 are the same as or different from each other, and each independently an integer of 0 to 4, and

[0067] when r11, r12, r21, and r22 are each 2 or more, the structures in the parenthesis are the same as or different from each other.

[0068] According to an exemplary embodiment of the present specification, Formula 1 may be represented by any one of the following Formulae 5 to 8.

[Formula 5]

-continued

[Formula 6]

[Formula 7]

[Formula 8]

[0069] In Formulae 5 to 8,

[0070] the definition of Ar1, Ar2, L, R1 to R4, m, a, and b is the same as defined in Formula 1.

[0071] According to an exemplary embodiment of the present specification, Formula 2 may be represented by any one of the following Formulae 2-1 to 2-4.

[Formula 2-1]

-continued

[Formula 2-2]

[Formula 2-3]

[Formula 2-4]

[0072] In Formulae 2-1 to 2-4,

[0073] the definition of Ar1, Ar2, L, R3, R4, a, and b is the same as defined in Formula 1,

[0074] the definition of R11, R12, r11, and r12 is the same as defined in Formula 2.

[0075] According to an exemplary embodiment of the present specification, Formula 3 may be represented by any one of the following Formulae 3-1 to 3-4.

[Formula 3-1]

[Formula 3-2]

[Formula 3-3]

[Formula 3-4]

[0076] In Formulae 3-1 to 3-4,

[0077] the definition of Ar1, Ar2, L, R3, R4, a, and b is the same as defined in Formula 1, and

[0078] the definition of R21, R22, r21, and r22 is the same as defined in Formula 3.

[0079] According to an exemplary embodiment of the present specification, X1 and X2 are the same as or different from each other, and each independently a substituted or unsubstituted alkyl group.

[0080] According to an exemplary embodiment of the present specification, X1 and X2 are the same as or different from each other, and each independently an alkyl group.

[0081] According to an exemplary embodiment of the present specification, X1 and X2 are a methyl group.

[0082] According to an exemplary embodiment of the present specification, Ar1 and Ar2 are the same as each other, and a substituted or unsubstituted aryl group.

[0083] According to an exemplary embodiment of the present specification, Ar1 and Ar2 are the same as each other, and a substituted or unsubstituted monocyclic to tricyclic aryl group.

[0084] According to an exemplary embodiment of the present specification, Ar1 and Ar2 are the same as each other, and a substituted or unsubstituted phenyl group; a substituted or unsubstituted biphenyl group; a substituted or unsubstituted naphthyl group; or a substituted or unsubstituted phenanthryl group.

[0085] According to an exemplary embodiment of the present specification, Ar1 and Ar2 are the same as each other, and a phenyl group; a biphenyl group; a naphthyl group; or a phenanthryl group.

[0086] According to an exemplary embodiment of the present specification, R1 and R2 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a silyl group; a boron group; an alkyl group; a cycloalkyl group; an alkoxy group; an aryloxy group; an alkylthio group; an arylthio group; an alkylsulfoxy group; an arylsulfoxy group; an alkenyl group; an aralkyl group; an aralkenyl group; an alkylaryl group; an alkylamine group; an aralkylamine group; a heteroarylamine group; an arylamine group; an arylheteroarylamine group; an arylphosphine group; a phosphineoxide group; an aryl group; or a hetero-cyclic group, or may combine with an adjacent group to form a ring.

[0087] According to an exemplary embodiment of the present specification, R1 and R2 are the same as or different from each other, and each independently a substituted or unsubstituted alkyl group; or a substituted or unsubstituted monocyclic to tricyclic aryl group, or combine with each other to form a substituted or unsubstituted ring.

[0088] According to an exemplary embodiment of the present specification, R1 and R2 are the same as or different from each other, and each independently a substituted or unsubstituted alkyl group; or a substituted or unsubstituted phenyl group, or combine with each other to form a substituted or unsubstituted ring.

[0089] According to an exemplary embodiment of the present specification, R1 and R2 are the same as or different from each other, and each independently hydrogen; deuterium; halogen; an alkyl group; or an aryl group, which is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium, an alkyl group, and an alkoxy group, or combine with each other to form a ring.

[0090] According to an exemplary embodiment of the present specification, R1 and R2 are the same as or different

from each other, and each independently an alkyl group; and an aryl group, or combine with each other to form a ring.

[0091] According to an exemplary embodiment of the present specification, R1 and R2 are the same as or different from each other, and each independently an alkyl group; or a phenyl group, or combine with each other to form a ring.

[0092] According to an exemplary embodiment of the present specification, R1 and R2 are the same as or different from each other, and each independently a methyl group; or a phenyl group, or combine with each other to form a ring.

[0093] According to an exemplary embodiment of the present specification, R3 and R4 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a silyl group; a boron group; an alkyl group; a cycloalkyl group; an alkoxy group; an aryloxy group; an alkylthioxy group; an arylthioxy group; an alkylsulfoxy group; an arylsulfoxy group; an alkenyl group; an aralkyl group; an aralkenyl group; an alkylaryl group; an alkylamine group; an aralkylamine group; an arylphosphine group; a phosphineoxide group; an aryl group; or a hetero-cyclic group.

[0094] According to an exemplary embodiment of the present specification, R3 and R4 are the same as or different from each other, and each independently hydrogen; deuterium; a substituted or unsubstituted alkyl group; a substituted or unsubstituted alkoxy group; or a substituted or unsubstituted aryl group.

[0095] According to an exemplary embodiment of the present specification, R3 and R4 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; an alkyl group, which is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium, a halogen group, an alkyl group, and an aryl group; an alkoxy group, which is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium, a halogen group, an alkyl group, and an aryl group; or an aryl group, which is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium, a halogen group, an alkyl group, and an aryl group.

[0096] According to an exemplary embodiment of the present specification, R3 and R4 are the same as or different from each other, and each independently hydrogen; deuterium; an alkyl group; an alkoxy group; or an aryl group.

[0097] According to an exemplary embodiment of the present specification, R3 is hydrogen, and R4 is hydrogen; deuterium; a substituted or unsubstituted alkyl group; a substituted or unsubstituted alkoxy group; or a substituted or unsubstituted aryl group.

[0098] According to an exemplary embodiment of the present specification, R3 is hydrogen, and R4 is hydrogen; deuterium; an alkyl group; an alkoxy group; or an aryl group.

[0099] According to an exemplary embodiment of the present specification, R3 and R4 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; or an alkyl group.

[0100] According to an exemplary embodiment of the present specification, R3 and R4 are hydrogen.

[0101] According to an exemplary embodiment of the present specification, R4 is hydrogen; or a substituted or unsubstituted fluorenyl group.

[0102] According to an exemplary embodiment of the present specification, R4 is hydrogen; or a fluorenyl group, which is unsubstituted or substituted with an alkyl group or an aryl group.

[0103] According to an exemplary embodiment of the present specification, R4 is hydrogen; or a fluorenyl group, which is unsubstituted or substituted with an alkyl group or a phenyl group.

[0104] According to an exemplary embodiment of the present specification, R4 is hydrogen; or a fluorenyl group, which is unsubstituted or substituted with an alkyl group.

[0105] According to an exemplary embodiment of the present specification, R4 is hydrogen.

[0106] According to an exemplary embodiment of the present specification, R3 is hydrogen.

[0107] According to an exemplary embodiment of the present specification, L is a naphthylene, which is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium, a halogen group, a nitrile group, a nitro group, a hydroxy group, a carbonyl group, an ester group, an imide group, an amino group, a phosphineoxide group, an alkoxy group, an aryloxy group, an alkylthioxy group, an arylthioxy group, an alkylsulfoxy group, an arylsulfoxy group, a silyl group, a boron group, an alkyl group, a cycloalkyl group, an alkenyl group, an aryl group, an aralkyl group, an aralkenyl group, an alkylaryl group, an alkylamine group, an aralkylamine group, a heteroarylamine group, an arylamine group, an arylphosphine group, and a hetero-cyclic group; a phenanthrylene, which is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium, a halogen group, a nitrile group, a nitro group, a hydroxy group, a carbonyl group, an ester group, an imide group, an amino group, a phosphineoxide group, an alkoxy group, an aryloxy group, an alkylthioxy group, an arylthioxy group, an alkylsulfoxy group, an arylsulfoxy group, a silyl group, a boron group, an alkyl group, a cycloalkyl group, an alkenyl group, an aryl group, an aralkyl group, an aralkenyl group, an alkylaryl group, an alkylamine group, an aralkylamine group, a heteroarylamine group, an arylamine group, an arylphosphine group, and a hetero-cyclic group; or a fluorenylene, which is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium, a halogen group, a nitrile group, a nitro group, a hydroxy group, a carbonyl group, an ester group, an imide group, an amino group, a phosphineoxide group, an alkoxy group, an aryloxy group, an alkylthioxy group, an arylthioxy group, an alkylsulfoxy group, an arylsulfoxy group, a silyl group, a boron group, an alkyl group, a cycloalkyl group, an alkenyl group, an aryl group, an aralkyl group, an aralkenyl group, an alkylaryl group, an alkylamine group, an aralkylamine group, a heteroarylamine group, an arylamine group, an arylphosphine group, and a hetero-cyclic group.

[0108] According to an exemplary embodiment of the present specification, L is naphthylene; phenanthrylene; or fluorenylene substituted with an alkyl group.

[0109] According to an exemplary embodiment of the present specification, L may be any one selected from the following structures.

[0110] In the structural formulae,

[0111] A1 and A2 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthioxy group; a substituted or unsubstituted arylthioxy group; a substituted or unsubstituted alkylsulfoxy group; a substituted or unsubstituted arylsulfoxy group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkylaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; a substituted or unsubstituted phosphineoxide group; a substituted or unsubstituted aryl group; or a substituted or unsubstituted hetero-cyclic group, or may combine with an adjacent group to form a substituted or unsubstituted ring, and

[0112] the structures may be unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a phosphineoxide group; an alkoxy group; an aryloxy group; an alkylthioxy group; an arylthioxy group; an alkylsulfoxy group; an arylsulfoxy group; a silyl group; a boron group; an alkyl group; a cycloalkyl group; an alkenyl group; an aryl group; an aralkyl group; an aralkenyl group; an alkylaryl group; an alkylamine group; an aralkylamine group; a heteroarylamine group; an arylamine group; an arylphosphine group; and a hetero-cyclic group.

[0113] According to an exemplary embodiment of the present specification, L may be any one selected from the following structures.

-continued

[0115] A1 and A2 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthioxy group; a substituted or unsubstituted arylthioxy group; a substituted or unsubstituted alkylsulfoxy group; a substituted or unsubstituted arylsulfoxy group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkylaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; a substituted or unsubstituted phosphineoxide group; a substituted or unsubstituted aryl group; or a substituted or unsubstituted

hetero-cyclic group, or may combine with an adjacent group to form a substituted or unsubstituted ring, and

[0116] the structures may be unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a phosphineoxide group; an alkoxy group; an aryloxy group; an alkylthioxy group; an arylthioxy group; an alkylsulfoxy group; an arylsulfoxy group; a silyl group; a boron group; an alkyl group; a cycloalkyl group; an alkenyl group; an aryl group; an aralkyl group; an aralkenyl group; an alkylaryl group; an alkylamine group; an aralkylamine group; a heteroarylamine group; an arylamine group; an arylphosphine group; and a hetero-cyclic group.

[0117] According to an exemplary embodiment of the present specification, the

moiety may be any one selected from the following structures.

[0118] In the structures,

[0119] the definition of R1 and R2 is the same as defined in Formula 1, and

[0120] the structures may be unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester

group; an imide group; an amino group; a phosphineoxide group; an alkoxy group; an aryloxy group; an alkylthioxy group; an arylthioxy group; an alkylsulfoxy group; an arylsulfoxy group; a silyl group; a boron group; an aryl group; a cycloalkyl group; an alkenyl group; an aryl group; an aralkyl group; an aralkenyl group; an alkylaryl group; an alkylamine group; an aralkylamine group; a heteroarylamine group; an arylamine group; an arylphosphine group; and a hetero-cyclic group.

[0121] According to an exemplary embodiment of the present specification, m is 1.

[0122] According to an exemplary embodiment of the present specification, the compound of Formula 1 may be any one selected from the following compounds.

[0123] The compound represented by Formula 1 may be prepared based on the Preparation Examples to be described below. According to an exemplary embodiment, the compound may be prepared by the method such as the following Reaction Formula 1.

[Reaction Formula 1]

-continued

[0124] In the reaction formula, the definition of Ar1, Ar2, L, R1, R2, R3, R4, a, b, and m is the same as that in Formula 1.

[0125] Specifically, according to an exemplary embodiment of the present specification, the compound of Formula 1 may be prepared by coupling a compound of a triazine derivative substituted with halogen with an aromatic compound substituted with boronic acid or a boronic acid derivative using a palladium catalytic reaction.

[0126] Further, the present specification provides an organic light emitting device including the compound represented by Formula 1.

[0127] An exemplary embodiment of the present specification provides an organic light emitting device including: a first electrode; a second electrode provided to face the first electrode; and one or more organic material layers provided between the first electrode and the second electrode, in which one or more layers of the organic material layers includes the compound of Formula 1.

[0128] The organic material layer of the organic light emitting device of the present specification may also be composed of a single-layered structure, but may be composed of a multi-layered structure in which two or more organic material layers are stacked. For example, the organic light emitting device of the present invention may have a structure including a hole injection layer, a hole transporting layer, a light emitting layer, an electron transporting layer, an electron injection layer, and the like as organic material layers. However, the structure of the organic light emitting device is not limited thereto, and may include a fewer number of organic layers.

[0129] In an exemplary embodiment of the present specification, the organic material layer includes a hole injection layer, a hole transporting layer, or a layer which simultaneously transports and injects holes, and the hole injection layer, the hole transporting layer, or the layer which simultaneously transports and injects holes includes the compound of Formula 1.

[0130] In another exemplary embodiment, the organic material layer includes a light emitting layer, and the light emitting layer includes the compound of Formula 1.

[0131] According to an exemplary embodiment of the present specification, the organic material layer includes an electron transporting layer or an electron injection layer, and

the electron transporting layer or the electron injection layer includes the compound of Formula 1.

[0132] In an exemplary embodiment of the present specification, the electron transporting layer, the electron injection layer, or the layer which simultaneously transports and injects electrons includes the compound of Formula 1.

[0133] In another exemplary embodiment, the organic material layer includes a light emitting layer and an electron transporting layer, and the electron transporting layer includes the compound of Formula 1.

[0134] In still another exemplary embodiment, the organic light emitting device may be an organic light emitting device having a structure (normal type) in which a positive electrode, one or more organic material layers, and a negative electrode are sequentially stacked on a substrate.

[0135] In yet another exemplary embodiment, the organic light emitting device may be an organic light emitting device having a reverse-direction structure (inverted type) in which a negative electrode, one or more organic material layers, and a positive electrode are sequentially stacked on a substrate.

[0136] For example, the structure of the organic light emitting device according to an exemplary embodiment of the present specification is illustrated in FIGS. 1 and 2.

[0137] FIG. 1 illustrates an example of an organic light emitting device composed of a substrate 1, a positive electrode 2, a light emitting layer 3, and a negative electrode 4. In the structure, the compound may be included in the light emitting layer.

[0138] FIG. 2 illustrates an example of an organic light emitting device composed of a substrate 1, a positive electrode 2, a hole injection layer 5, a hole transporting layer 6, a light emitting layer 7, an electron transporting layer 8, and a negative electrode 4. In the structure, the compound may be included in one or more layers of the hole injection layer, the hole transporting layer, the light emitting layer, and the electron transporting layer.

[0139] The organic light emitting device of the present specification may be manufactured by the materials and methods known in the art, except that one or more layers of the organic material layers include the compound of the present specification, that is, the compound of Formula 1.

[0140] When the organic light emitting device includes a plurality of organic material layers, the organic material layer may be formed of the same material or different materials.

[0141] One exemplary embodiment of the present specification is an organic light emitting device including: a first electrode; a second electrode provided to face the first electrode; a light emitting layer provided between the first electrode and the second electrode; and two or more organic material layers provided between the light emitting layer and the first electrode, or between the light emitting layer and the second electrode, in which at least one of the two or more organic material layers includes the hetero-cyclic compound. In one exemplary embodiment, as the two or more organic material layers, two or more may be selected from the group consisting of an electron transporting layer, an electron injection layer, a layer which simultaneously transports and injects electrons, and a hole blocking layer.

[0142] In an exemplary embodiment of the present specification, the organic material layer includes two or more electron transporting layers, and at least one of the two or more electron transporting layers includes the hetero-cyclic

compound. Specifically, in an exemplary embodiment of the present specification, the hetero-cyclic compound may also be included in one layer of the two or more electron transporting layers, and may be included in each of the two or more electron transporting layers.

[0143] In addition, in an exemplary embodiment of the present specification, when the hetero-cyclic compound is included in each of the two or more electron transporting layers, the other materials except for the hetero-cyclic compound may be the same as or different from each other.

[0144] The organic light emitting device of the present specification may be manufactured by the materials and methods known in the art, except that one or more layers of the organic material layers include the compound of Formula 1, that is, the compound represented by Formula 1.

[0145] For example, the organic light emitting device of the present specification may be manufactured by sequentially stacking a first electrode, an organic material layer, and a second electrode on a substrate. In this case, the organic light emitting device may be manufactured by depositing a metal or a metal oxide having conductivity, or an alloy thereof on a substrate to form a positive electrode by using a physical vapor deposition (PVD) method such as sputtering or e-beam evaporation, forming an organic material layer including a hole injection layer, a hole transporting layer, a light emitting layer, and an electron transporting layer thereon, and then depositing a material, which may be used as a negative electrode, thereon. In addition to the method described above, an organic light emitting device may be made by subsequently depositing a negative electrode material, an organic material layer, and a positive electrode material on a substrate.

[0146] Further, the compound of Formula 1 may be formed as an organic material layer by not only a vacuum deposition method, but also a solution application method when an organic light emitting device is manufactured. Here, the solution application method means spin coating, dip coating, doctor blading, inkjet printing, screen printing, a spray method, roll coating, and the like, but is not limited thereto.

[0147] In addition to the method as described above, an organic light emitting device may also be manufactured by sequentially stacking a negative electrode material, an organic material layer, and a positive electrode material on a substrate (International Publication No. 2003/012890). However, the manufacturing method is not limited thereto.

[0148] In an exemplary embodiment of the present specification, the first electrode is a positive electrode, and the second electrode is a negative electrode.

[0149] In another exemplary embodiment, the first electrode is a negative electrode, and the second electrode is a positive electrode.

[0150] As the positive electrode material, a material having a large work function is usually preferred so as to smoothly inject holes into an organic material layer. Specific examples of the positive electrode material which may be used in the present invention include: a metal, such as vanadium, chromium, copper, zinc, and gold, or alloys thereof; a metal oxide, such as zinc oxide, indium oxide, indium tin oxide (ITO), and indium zinc oxide (IZO); a combination of metal and oxide, such as ZnO:Al or SnO₂:Sb; an electrically conductive polymer, such as poly(3-

methylthiophene), poly[3,4-(ethylene-1,2-dioxy)thiophene] (PEDOT), polypyrrole, and polyaniline, and the like, but are not limited thereto.

[0151] As the negative electrode material, a material having a small work function is usually preferred so as to smoothly inject electrons into an organic material layer. Specific examples of the negative electrode material include: a metal, such as magnesium, calcium, sodium, potassium, titanium, indium, yttrium, lithium, gadolinium, aluminum, silver, tin, and lead, or alloys thereof; a multi-layered structural material, such as LiF/Al or LiO₂/Al, and the like, but are not limited thereto.

[0152] The hole injection material is a layer which injects holes from an electrode, and is preferably a compound which has a capability of transporting holes, and thus has an effect of injecting holes at positive electrode and an excellent effect of injecting holes for the light emitting layer or the light emitting material, prevents excitons produced from the light emitting layer from moving to an electron injection layer or an electron injection material, and is excellent in forming a thin film. It is preferred that the highest occupied molecular orbital (HOMO) of the hole injection material is between the work function of the positive electrode material and the HOMO of an adjacent organic material layer. Specific examples of the hole injection material include metal porphyrin, oligothiophene, an arylamine-based organic material, a hexanitride hexaazatriphenylene-based organic material, a quinacridone-based organic material, a perylene-based organic material, anthraquinone, a polyaniline and polythiophene-based electrically conductive polymer, and the like, but are not limited thereto.

[0153] The electron transporting layer is a layer which receives holes from the hole injection layer and transports holes to the light emitting layer, and a hole transporting material is suitably a material which may receive holes from a positive electrode or a hole injection layer to transfer holes to a light emitting layer, and has a large mobility for the holes. Specific examples thereof include an arylamine-based organic material, an electrically conductive polymer, a block copolymer in which a conjugate portion and a non-conjugate portion are present together, and the like, but are not limited thereto.

[0154] The light emitting material is a material which may receive holes and electrons from the hole transporting layer and the electron transporting layer, respectively, and combine the holes and the electrons to emit light in a visible ray region, and is preferably a material having good quantum efficiency to fluorescence or phosphorescence. Specific examples thereof include: a 8-hydroxy-quinoline aluminum complex (Alq₃); a carbazole-based compound; a dimerized styryl compound; BAlq; a 10-hydroxybenzoquinoline-metal compound; a benzoxazole, benzothiazole and benzimidazole-based compound; a poly(p-phenylenevinylene (PPV)-based polymer; a spiro compound; polyfluorene, lubrene, and the like, but are not limited thereto.

[0155] The light emitting layer may include a host material and a dopant material. Examples of the host material include a condensed aromatic ring derivative, or a hetero ring-containing compound, and the like. Specifically, examples of the condensed aromatic ring derivative include an anthracene derivative, a pyrene derivative, a naphthalene derivative, a pentacene derivative, a phenanthrene compound, a fluoranthene compound, and the like, and examples of the hetero ring-containing compound include a carbazole

derivative, a dibenzofuran derivative, a ladder-type furan compound, a pyrimidine derivative, and the like, but the examples thereof are not limited thereto. Examples of the dopant material include an aromatic amine derivative, a styrylamine compound, a boron complex, a fluoranthene compound, a metal complex, and the like. Specifically, the aromatic amine derivative is a condensed aromatic ring derivative having a substituted or unsubstituted arylamino group, and examples thereof include a pyrene, an anthracene, a chrysene, a perflanthene, and the like having an arylamino group, and the styrylamine compound is a compound in which a substituted or unsubstituted arylamine is substituted with at least one arylvinyl group, and one or two or more substituents selected from the group consisting of an aryl group, a silyl group, an alkyl group, a cycloalkyl group, and an arylamino group are substituted or unsubstituted. Specific examples thereof include styrylamine, styryldiamine, styryltriamine, styryltetramine, and the like, but are not limited thereto. Further, examples of the metal complex include an iridium complex, a platinum complex, and the like, but are not limited thereto.

[0156] The electron transporting layer is a layer which receives electrons from an electron injection layer and transports electrons to a light emitting layer, and an electron transporting material is a material which may receive electrons well from a negative electrode and may transfer electrons to a light emitting layer, and is suitably a material which has large mobility for the electrons. Specific examples thereof include: an Al complex of 8-hydroxyquinoline; a complex including Alq₃; an organic radical compound; and hydroxyflavone-metal complex, but are not limited thereto. The electron transporting layer may be used with any desired cathode material, as used according to the related art. In particular, examples of an appropriate cathode material are a typical material which has a low work function, followed by an aluminum layer or a silver layer. Specific examples thereof include cesium, barium, calcium, ytterbium, and samarium, in each case followed by an aluminum layer or a silver layer.

[0157] The electron injection layer is a layer which injects electrons from an electrode, and is preferably a compound which has a capability of transporting electrons, has an effect of injecting electrons from a negative electrode and an excellent effect of injecting electrons into a light emitting layer or a light emitting material, prevents excitons produced from the light emitting layer from moving to the hole injection layer, and is also excellent in forming a thin film. Specific examples thereof include fluorenone, anthraquinodimethane, diphenquinone, thiopyran dioxide, oxazole, oxadiazole, triazole, imidazole, perylenetetracarboxylic acid, fluorenylidene methane, anthrone and derivatives thereof, a metal complex compound, a nitrogen-containing 5-membered derivative, and the like, but are not limited thereto.

[0158] Examples of the metal complex compound include 8-hydroxyquinolinato lithium, bis(8-hydroxyquinolinato) zinc, bis(8-hydroxyquinolinato) copper, bis(8-hydroxyquinolinato) manganese, tris(8-hydroxyquinolinato) aluminum, tris(2-methyl-8-hydroxyquinolinato) aluminum, tris(8-hydroxyquinolinato) gallium, bis(10-hydroxybenzo[h]quinolinato) beryllium, bis(10-hydroxybenzo[h]quinolinato) zinc, bis(2-methyl-8-quinolinato) chlorogallium, bis(2-methyl-8-quinolinato) (o-cresolato) gallium, bis(2-methyl-8-quinoli-

nato) (1-naphtholato) aluminum, bis(2-methyl-8-quinolino) (2-naphtholato) gallium, and the like, but are not limited thereto.

[0159] The organic light emitting device according to the present specification may be a top emission type, a bottom emission type, or a dual emission type according to the material to be used.

[0160] In an exemplary embodiment of the present specification, the compound of Formula 1 may be included in an organic solar cell or an organic transistor in addition to the organic light emitting device.

[0161] The preparation of the compound represented by Formula 1 and the organic light emitting device including the same will be specifically described in the following Examples. However, the following Examples are provided for illustrating the present specification, and the range of the present specification is not limited thereby.

PREPARATION EXAMPLES

Preparation Example 1

Preparation of [Compound 1]

[0162] 2-chloro-4,6-diphenyl-1,3,5-triazine (10.0 g, 37.4 mmol) and 2-(2-(9,9-diphenyl-9H-fluoren-2-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (21.3 g, 37.4 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.8 g of $Pd(PPh_3)_4$ were put thereinto, and then the resulting mixture was stirred and refluxed for 5 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 1] (19.4 g, yield 77%, MS: $[M+H]^+=676$).

Preparation Example 2

Preparation of [Compound 6]

[0163] 2-chloro-4,6-diphenyl-1,3,5-triazine (10.0 g, 37.4 mmol) and 2-(4-(9,9'-spiro[fluoren]-2-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (21.3 g, 37.4 mmol) were put into 200 mL of THF.

[0164] 75 mL of 2.0 M K_2CO_3 and 0.8 g of $Pd(PPh_3)_4$ were put thereinto, and then the resulting mixture was stirred and refluxed for 6 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 6] (18.7 g, yield 74%, MS: $[M+H]^+=674$).

Preparation Example 3

Preparation of [Compound 19]

[0165] 2-chloro-4,6-diphenyl-1,3,5-triazine (10.0 g, 37.4 mmol) and 2-(7-(9,9-diphenyl-9H-fluoren-4-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (21.3 g, 37.4 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.8 g of $Pd(PPh_3)_4$ were put thereinto, and then the resulting mixture was stirred and refluxed for 8 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 19] (17.7 g, yield 70%, MS: $[M+H]^+=676$).

Preparation Example 4

Preparation of [Compound 23]

[0166] 2,4-di([1,1'-biphenyl]-4-yl)-6-chloro-1,3,5-triazine (10.0 g, 23.8 mmol) and 2-(2-(9,9-dimethyl-9H-fluoren-2-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (10.6 g, 23.8 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.5 g of $Pd(PPh_3)_4$ were put thereinto, and then the resulting mixture was stirred and refluxed for 9 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 23] (12.7 g, yield 76%, MS: $[M+H]^+=704$).

Preparation Example 5

Preparation of [Compound 67]

[0167] 2,4-di([1,1'-biphenyl]-2-yl)-6-chloro-1,3,5-triazine (10.0 g, 23.8 mmol) and 2-(5-(9,9-dimethyl-9H-fluoren-2-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (10.6 g, 23.8 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.5 g of $Pd(PPh_3)_4$ were put thereinto, and then the resulting mixture was stirred and refluxed for 5 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 67] (11.9 g, yield 71%, MS: $[M+H]^+=704$).

Preparation Example 6

Preparation of [Compound 89]

[0168] 2-chloro-4,6-di(naphthalen-1-yl)-1,3,5-triazine (10.0 g, 27.2 mmol) and 2-(6-(9,9-dimethyl-9H-fluoren-2-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (12.1 g, 27.2 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.5 g of $Pd(PPh_3)_4$ were put thereinto, and then the resulting mixture was stirred and refluxed for 6 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 89] (12.2 g, yield 69%, MS: $[M+H]^+=652$).

Preparation Example 7

Preparation of [Compound 112]

[0169] 2-chloro-4,6-di(naphthalen-2-yl)-1,3,5-triazine (10.0 g, 27.2 mmol) and 2-(7-(9,9-dimethyl-9H-fluoren-2-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (12.1 g, 27.2 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.5 g of $Pd(PPh_3)_4$ were put thereinto, and then the resulting mixture was stirred and refluxed for 6 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 112] (13.6 g, yield 77%, MS: $[M+H]^+=652$).

Preparation Example 8

Preparation of [Compound 127]

[0170] 2-chloro-4,6-di(phenanthren-9-yl)-1,3,5-triazine (10.0 g, 21.4 mmol) and 2-(5-(9,9-dimethyl-9H-fluoren-2-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (9.5 g, 21.4 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.5 g of $Pd(PPh_3)_4$ were put therein, and then the resulting mixture was stirred and refluxed for 7 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 127] (10.8 g, yield 67%, MS: $[M+H]^+=752$).

Preparation Example 9

Preparation of [Compound 183]

[0171] 2-chloro-4,6-diphenyl-1,3,5-triazine (10.0 g, 37.4 mmol) and 2-(10-(9,9-dimethyl-9H-fluoren-2-yl)phenanthren-9-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (18.6 g, 37.4 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.8 g of $Pd(PPh_3)_4$ were put therein, and then the resulting mixture was stirred and refluxed for 6 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 183] (15.3 g, yield 68%, MS: $[M+H]^+=602$).

Preparation Example 10

Preparation of [Compound 263]

[0172] 2-chloro-4,6-diphenyl-1,3,5-triazine (10.0 g, 37.4 mmol) and 4,4,5,5-tetramethyl-2-(9,9,9',9'-tetramethyl-9H,9'H-[2,2'-bifluoren]-7-yl)-1,3,2-dioxaborolane (19.2 g, 37.4 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.8 g of $Pd(PPh_3)_4$ were put therein, and then the resulting mixture was stirred and refluxed for 6 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 263] (16.6 g, yield 72%, MS: $[M+H]^+=618$).

Preparation Example 11

Preparation of [Compound 281]

[0173] 2-chloro-4,6-diphenyl-1,3,5-triazine (10.0 g, 37.4 mmol) and 2-(7-(9,9-diphenyl-9H-fluoren-2-yl)naphthalen-2-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (21.3 g, 37.4 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.8 g of $Pd(PPh_3)_4$ were put therein, and then the resulting mixture was stirred and refluxed for 5 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 281] (19.7 g, yield 78%, MS: $[M+H]^+=676$).

Preparation Example 12

Preparation of [Compound 299]

[0174] 2-chloro-4,6-diphenyl-1,3,5-triazine (10.0 g, 37.4 mmol) and 2-(3-(9,9-diphenyl-9H-fluoren-2-yl)naphthalen-2-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (21.3 g, 37.4 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3

and 0.8 g of $Pd(PPh_3)_4$ were put therein, and then the resulting mixture was stirred and refluxed for 7 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 299] (18.2 g, yield 72%, MS: $[M+H]^+=676$).

Preparation Example 13

Preparation of [Compound 312]

[0175] 2-chloro-4,6-di(naphthalen-1-yl)-1,3,5-triazine (10.0 g, 27.2 mmol) and 2-(3-(9,9-dimethyl-9H-fluoren-2-yl)naphthalen-2-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (12.1 g, 27.2 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.6 g of $Pd(PPh_3)_4$ were added therein, and then the resulting mixture was stirred and refluxed for 8 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 312] (13.5 g, yield 76%, MS: $[M+H]^+=652$).

Preparation Example 14

Preparation of [Compound 316]

[0176] 2-chloro-4,6-bis(phenyl-d5)-1,3,5-triazine (10.0 g, 36.0 mmol) and 2-(2-(9,9-diphenyl-9H-fluoren-2-yl)naphthalen-1-yl)-4,4,5,5-tetramethyl-1,3,2-dioxaborolane (20.5 g, 36.0 mmol) were put into 200 mL of THF. 75 mL of 2.0 M K_2CO_3 and 0.8 g of $Pd(PPh_3)_4$ were put therein, and then the resulting mixture was stirred and refluxed for 8 hours. The mixture was cooled to normal temperature, and then a solid produced by filtering the mixture was recrystallized with chloroform and ethanol, thereby preparing [Compound 361] (16.3 g, yield 66%, MS: $[M+H]^+=686$).

Example

Example 1

[0177] A glass substrate thinly coated with indium tin oxide (ITO) to have a thickness of 500 Å was put into distilled water in which a detergent was dissolved, and ultrasonically washed. In this case, a product manufactured by Fischer Co., was used as the detergent, and distilled water twice filtered using a filter manufactured by Millipore Co., was used as the distilled water. After the ITO was washed for 30 minutes, ultrasonic washing was conducted twice using distilled water for 10 minutes. After the washing using distilled water was completed, ultrasonic washing was conducted using isopropyl alcohol, acetone, and methanol solvents, and drying was conducted, and then the product was transported to a plasma washing machine. In addition, the substrate was washed using oxygen plasma for 5 minutes, and then transported to a vacuum evaporator.

[0178] The following Compound [HI-A] was thermally vacuum deposited to a thickness of 600 Å on the transparent ITO electrode, which was prepared as described above, thereby forming a hole injection layer. Compound [HAT] (50 Å) and the following Compound [HT-A] (600 Å) were sequentially vacuum deposited on the hole injection layer, thereby forming a hole transporting layer.

[0179] Subsequently, the following Compounds [BH] and [BD] were vacuum deposited at a weight ratio of 25:1 to

have a film thickness of 200 Å on the hole transporting layer, thereby forming a light emitting layer.

[0180] [Compound 1] and the following Compound [LiQ] (lithium quinolate) were vacuum deposited at a weight ratio of 1:1 on the light emitting layer, thereby forming an electron injection and transporting layer having a thickness of 350 Å. Lithium fluoride (LiF) and aluminum were subsequently deposited to have a thickness of 10 Å and 1,000

Å, respectively, on the electron injection and transporting layer, thereby forming a negative electrode.

[0181] In the aforementioned procedure, the deposition rate of the organic material was maintained at 0.4 to 0.9 Å/sec, the deposition rates of lithium fluoride and aluminum of the negative electrode were maintained at 0.3 Å/sec, and at 2 Å/sec, respectively, and the degree of vacuum during the deposition was maintained at 1×10^{-7} to 5×10^{-8} torr, thereby manufacturing an organic light emitting device.

Example 2

[0182] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 6] was used instead of [Compound 1] of [Example 1].

Example 3

[0183] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 19] was used instead of [Compound 1] of [Example 1].

Example 4

[0184] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 23] was used instead of [Compound 1] of [Example 1].

Example 5

[0185] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 67] was used instead of [Compound 1] of [Example 1].

Example 6

[0186] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 89] was used instead of [Compound 1] of [Example 1].

Example 7

[0187] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 112] was used instead of [Compound 1] of [Example 1].

Example 8

[0188] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 127] was used instead of [Compound 1] of [Example 1].

Example 9

[0189] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 183] was used instead of [Compound 1] of [Example 1].

Example 10

[0190] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 263] was used instead of [Compound 1] of [Example 1].

Example 11

[0191] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 281] was used instead of [Compound 1] of [Example 1].

Example 12

[0192] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 299] was used instead of [Compound 1] of [Example 1].

Example 13

[0193] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 312] was used instead of [Compound 1] of [Example 1].

Example 14

[0194] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [Compound 316] was used instead of [Compound 1] of [Example 1].

Comparative Example 1

[0195] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [ET-A] was used instead of [Compound 1] of [Example 1].

Comparative Example 2

[0196] An organic light emitting device was manufactured in the same manner as in [Example 1], except that [ET-B] was used instead of [Compound 1] of [Example 1].

[0197] For the organic light emitting devices manufactured by the above-described method, the driving voltage and the light emitting efficiency were measured at a current density of 10 mA/cm², and a time (T₉₀) for reaching a 90% value compared to the initial luminance was measured at a current density of 20 mA/cm². The results are shown in the following Table 1.

TABLE 1

	Voltage (V)	Efficiency (Cd/A)	Color coordinate (x, y)	Service life (h) T ₉₀ at 20 mA/cm ²
Example 1	4.50	5.28	(0.143, 0.095)	198
Example 2	4.62	5.16	(0.143, 0.094)	200
Example 3	4.79	5.01	(0.144, 0.096)	253
Example 4	4.55	5.12	(0.144, 0.095)	185
Example 5	4.41	5.48	(0.144, 0.097)	172
Example 6	4.46	4.86	(0.143, 0.098)	182
Example 7	4.51	4.99	(0.143, 0.098)	221
Example 8	4.87	4.88	(0.144, 0.097)	263
Example 9	4.62	5.17	(0.143, 0.098)	182
Example 10	4.81	4.93	(0.144, 0.096)	213
Example 11	4.66	5.17	(0.143, 0.095)	200
Example 12	4.44	5.22	(0.143, 0.098)	189
Example 13	4.50	4.99	(0.144, 0.096)	196
Example 14	4.55	5.22	(0.143, 0.096)	206
Comparative Example 1	5.63	4.06	(0.144, 0.098)	133
Comparative Example 2	5.32	4.51	(0.144, 0.099)	157

[0198] From the result of the table, the compound represented by Formula 1 according to the present invention may be used for an organic layer of the organic light emitting device which may simultaneously inject and transport electrons. The organic light emitting device using the same has

low driving voltage and high efficiency, and may improve stability of the device by hole stability of the compound.

[0199] In particular, the compound represented by Formula 1 according to the present invention is excellent in thermal stability, and may be used in a mixture with an n-type dopant when used in the organic layer which simultaneously injects and transports electrons.

EXPLANATION OF REFERENCE NUMERALS AND SYMBOLS

- [0200] 1: Substrate
 [0201] 2: Positive electrode
 [0202] 3: Light emitting layer
 [0203] 4: Negative electrode
 [0204] 5: Hole injection layer
 [0205] 6: Hole transporting layer
 [0206] 7: Light emitting layer
 [0207] 8: Electron transporting layer

1. A compound represented by the following Formula 1:

in Formula 1,

Ar1 and Ar2 are the same as each other, and a substituted or unsubstituted aryl group,

L is a substituted or unsubstituted naphthylene; a substituted or unsubstituted phenanthrylene; or a substituted or unsubstituted fluorenylene,

R1 and R2 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthioxy group; a substituted or unsubstituted arylthioxy group; a substituted or unsubstituted alkylsulfoxy group; a substituted or unsubstituted arylsulfoxy group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkylaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; a substituted or unsubstituted phosphineoxide group; a substituted or unsubstituted aryl group; or a substituted or unsubstituted hetero-

cyclic group, or optionally combine with an adjacent group to form a substituted or unsubstituted ring, R3 and R4 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthioxy group; a substituted or unsubstituted arylthioxy group; a substituted or unsubstituted alkylsulfoxy group; a substituted or unsubstituted arylsulfoxy group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkylaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; a substituted or unsubstituted phosphineoxide group; a substituted or unsubstituted aryl group; or a substituted or unsubstituted heterocyclic group, or optionally combine with an adjacent group to form a substituted or unsubstituted ring,

m is an integer of 1 to 5,

a is an integer of 0 to 3, and

b is an integer of 0 to 4, and

when m, a, and b are each 2 or more, the structures in the parenthesis are the same as or different from each other.

2. The compound of claim 1, wherein Formula 1 is represented by any one of the following Formulae 2 to 4:

-continued

[Formula 4]

3. The compound of claim 1, wherein Formula 1 is represented by any one of the following Formulae 5 to 8:

[Formula 5]

in Formulae 2 to 4,

the definition of Ar1, Ar2, L, R3, R4, a, b, and m is the same as defined in Formula 1,

the definition of R11, R12, R21, and R22 is the same as the definition of R3 and R4,

X1 and X2 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthio group; a substituted or unsubstituted arylthio group; a substituted or unsubstituted alkylsulfonyl group; a substituted or unsubstituted arylsulfonyl group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; or a substituted or unsubstituted phosphine oxide group; or optionally combine with an adjacent group to form a substituted or unsubstituted ring,

r11 and r12 are the same as or different from each other, and each independently an integer of 0 to 5,

r21 and r22 are the same as or different from each other, and each independently an integer of 0 to 4, and

when r11, r12, r21, and r22 are each 2 or more, the structures in the parenthesis are the same as or different from each other.

[Formula 6]

[Formula 7]

[Formula 8]

in Formulae 5 to 8,

the definition of Ar1, Ar2, L, R1 to R4, m, a, and b is the same as defined in Formula 1.

4. The compound of claim 1, wherein L is any one selected from the following structures:

-continued

in the structural formulae,

A1 and A2 are the same as or different from each other, and each independently hydrogen; deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a substituted or unsubstituted silyl group; a substituted or unsubstituted boron group; a substituted or unsubstituted alkyl group; a substituted or unsubstituted cycloalkyl group; a substituted or unsubstituted alkoxy group; a substituted or unsubstituted aryloxy group; a substituted or unsubstituted alkylthioxy group; a substituted or unsubstituted arylthioxy group; a substituted or unsubstituted alkylsulfoxy group; a substituted or unsubstituted arylsulfoxy group; a substituted or unsubstituted alkenyl group; a substituted or unsubstituted aralkyl group; a substituted or unsubstituted aralkenyl group; a substituted or unsubstituted alkylaryl group; a substituted or unsubstituted alkylamine group; a substituted or unsubstituted aralkylamine group; a substituted or unsubstituted heteroarylamine group; a substituted or unsubstituted arylamine group; a substituted or unsubstituted arylheteroarylamine group; a substituted or unsubstituted arylphosphine group; a substituted or unsubstituted phosphineoxide group; a substituted or unsubstituted

aryl group; or a substituted or unsubstituted heterocyclic group, or optionally combine with an adjacent group to form a substituted or unsubstituted ring, and the structures are optionally unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a phosphineoxide group; an alkoxy group; an aryloxy group; an alkylthioxy group; an arylthioxy group; an alkylsulfoxy group; an arylsulfoxy group; a silyl group; a boron group; an alkyl group; a cycloalkyl group; an alkenyl group; an aryl group; an aralkyl group; an aralkenyl group; an alkylaryl group; an alkylamine group; an aralkylamine group; a heteroarylamine group; an arylamine group; an arylphosphine group; and a hetero-cyclic group.

5. The compound of claim 1, wherein L is naphthylene; phenanthrylene; or fluorenylene substituted with an alkyl group.

6. The compound of claim 1, wherein Ar1 and Ar2 are the same as each other, and a phenyl group; a biphenyl group; a naphthyl group; or a phenanthryl group.

7. The compound of claim 1, wherein R1 and R2 are the same as or different from each other, and each independently an alkyl group; or an aryl group, which is unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium, and an alkyl group, or combine with each other to form a ring.

8. The compound of claim 1, wherein R3 and R4 are the same as or different from each other, and each independently hydrogen; deuterium; an alkyl group; an alkoxy group; or an aryl group.

9. The compound of claim 1, wherein the

moiety is any one selected from the following structures:

in the structures,

the definition of R1 and R2 is the same as defined in Formula 1, and

the structures are optionally unsubstituted or substituted with one or more substituents selected from the group consisting of deuterium; a halogen group; a nitrile group; a nitro group; a hydroxy group; a carbonyl group; an ester group; an imide group; an amino group; a phosphineoxide group; an alkoxy group; an aryloxy group; an alkylthioxy group; an arylthioxy group; an alkylsulfoxy group; an arylsulfoxy group; a silyl group; a boron group; an alkyl group; a cycloalkyl group; an alkenyl group; an aryl group; an aralkyl group; an aralkenyl group; an alkylaryl group; an alkylamine group; an aralkylamine group; a heteroarylamine group; an arylamine group; an arylphosphine group; and a hetero-cyclic group.

10. The compound of claim 1, wherein the compound of Formula 1 is any one selected from the following compounds:

**11.** An organic light emitting device, comprising:

a first electrode;

a second electrode provided to face the first electrode; and

one or more organic material layers provided between the first electrode and the second electrode,

wherein one or more layers of the organic material layers comprise the compound of claim 1.

12. The organic light emitting device of claim 11, wherein the organic material layer comprising the compound is a hole injection layer, a hole transporting layer, or a layer which simultaneously injects and transports holes.

13. The organic light emitting device of claim 11, wherein the organic material layer comprising the compound is an electron injection layer, an electron transporting layer, or a layer which simultaneously injects and transports electrons.

14. The organic light emitting device of claim 11, wherein the organic material layer comprising the compound is a light emitting layer.
