(57) **ABSTRACT**

(73) Assignee: **Conceivable, Inc.**, Austin, TX (US)

The present invention discloses software programs, systems and methods for increasing the chances of users conception by maximizing the user's fertility potential by providing a software program that combines identifying the underlying causes of infertility and using best practices as described by current medical literature for fertility changes along with herbal recommendations to provide personalized wellness recommendations that give the individual user the power to improve their natural fertility.

FIG. 11E

recommen- dation_id	title	body
1	Clotting	During your menstrual cycle, incorporate more foods that help improve circulation like oranges, ginger, dark chocolate, and salmon. Cold causes the capillaries to constrict and reduces blood circulation. Stay warm when you menstruate and save the low rise jeans and flip flops for later in the month.
2	Clotting	Oh no, my cycle got worse!! Try not to worry, sometimes, as your cycle adjusts, it will fluctuate. Stay on track with your program and your body will respond to your hard work.
3	Clotting	Way to go! Your hard work is showing up in your menstrual cycle! You have improved from last cycle.
4	Cramping	The warming effects of ginger can help relieve mild menstrual pain symptoms. Brew a tea with hot water and a few slices of fresh ginger for 5 min. A touch of honey sweetens the pot!
5	Cramping	It may seem obvious but a heating pad can do wonders for moderate menstrual cramps.
6	Cramping	It may seem obvious but a heating pad can do wonders for moderate menstrual cramps.
7	Cramping	Really hurting? Try sitting on your knees (if you can) and lean back as far as you can. Try to rest like this for 3 min breathing deeply into your abdomen.
8	Cramping	Really hurting? Try sitting on your knees (if you can) and lean back as far as you can. Try to rest like this for 3 min breathing deeply into your abdomen.
9	Cramping	Ouch, your pain is worse this cycle. Keep your head up. As your cycle begins to regulate, it may get a little worse before it gets better. Be sure to rank your stuck hurdle high this month so Conceivable knows to work harder for you in this area for next month.
10	Cramping	Improvement in menstrual pain is a good indicator that your body is doing a better job of building and shedding a healthy uterine lining each cycle. Sounds like you're getting the luxury suite ready for baby!
11	Volume	Unless there are a lot of clots in your blood, you might benefit from a lower dose of Release.
12	Volume	In order to make a fantastic, lush lining, you need to make some more blood, sister. Try increasing iron rich foods like, greens, lentils, raspberries, blueberries, and dried apricots.

1201

1202

1203

FIG. 12A

1203	13	Volume	Keep eating lots of iron rich foods!
	14	Color	If your blood is pale red, you would probably benefit from really pumping up the iron rich foods. Eat a bit more red meat, wild salmon, and dark berries.
	15	Color	Yippee, you are getting more fertile every month. Keep up the great work. Your body thanks you.
1204	16	Color	Rank your Hot hurdle a little higher next month and eat more cooling foods during cycle days 4-14 like, cucumber, hibiscus tea, and mint.
	17	Color	Rank your Hot hurdle a little higher next month and eat more cooling foods during cycle days 4-14 like, cucumber, hibiscus tea, and mint.
	18	Color	Be sure to check with your dr. to make sure your thyroid is functioning properly and stay as warm as possible. Wool socks really do make a difference.
	19	Color	Try to limit the foods that make stuck conditions worse like caffeine, greasy foods, heavy and complex meals.
1205	20	Ovulation	Be sure to take your herbs and incorporate a bit more raw food into your diet, including superfoods like spirulina.
	21	Cervical Fluid	The presence of fertile cervical fluid means it's baby making time, go get busy!
1206	22	Cervical Fluid	Be sure to take your herbs and incorporate a bit more raw food into your diet, including superfoods like spirulina.
1207	23	PMS Severity	How to unstick stuck? Try to manage your stress more carefully during this phase. Be sure to avoid caffeine, alcohol and greasy foods. Regular moderate exercise (even a 20 min walk at lunch) goes a very long way!
1208	24	PMS Symptoms	Gentle breast massage can do wonders to relieve your symptoms while you are getting unstuck. See how here!

FIG. 12A (Cont.)

25	PMS Symptoms	Make work a little easier for your digestion in the weeks prior to your period. Try to eat simply, with fewer heavy and difficult to digest foods. Sour foods like lemon apple cider vinegar may help regulate liver and hormone function.
26	PMS Symptoms	When you are feeling moody, try taking a tablespoon of apple cider vinegar with a glass of water and watch your mood improve pretty quickly
27	PMS Symptoms	PMS is the personification of being stuck. Pay close attention to how your pms presents because it can tell you so much about how your body is functioning!
28	PMS Symptoms	Headaches related to PMS require a delicate balance of rest and invigoration. After ovulation, try to get some extra minutes of sleep and sleep in on the weekends. Balance that with some regular mild to moderate exercise. Even a 20min walk at lunch will help!
29	Spotting	The good news is that you will notice the bleeding getting more regular as you unstick! Keep taking your herbs.
30	Follicular Temperature	Pay attention to eating the highest quality foods you can get your hands on, rest a ton and stay warm!
31	Follicular Temperature	Let's keep it cool this month. Stay hydrated, try cucumber water, and chamomile tea, and focus on eating cooling foods. You can find a list here. [link to cooling food list]
32	Follicular Temperature	This month try incorporating some frustration alleviating tactics like singing in your car, getting a bit more exercise, or trying some breathing exercises.
33	Luteal Temperature	The easiest thing is to stay warm. Add more warming foods to your diet like cinnamon, ginger, lamb and onions/garlic.
34	Luteal Temperature	This month try incorporating some frustration alleviating tactics like singing in your car, getting a bit more exercise, or trying some breathing exercises.
35	Luteal Temperature	You're able to sustain enough energy to keep your luteal BBT's elevated for a few days, but then peter out for the rest of the cycle. Focus on getting more rest, taking naps, and eating as well as possible!

1208

1209

1210

1211

FIG. 12B

36	Sleep	Sleep is so essential to your health and well being. What's one small thing you can do to improve your week? If you're a chronic non-sleeper, you might try taking 5mg of melatonin at bed.
37	Sleep	Stimulating your brain with bright light before bed can lead to disrupted sleep - just for tonight, try going without screens (computer, tv, phone) for the hour before you hop in bed.
38	Sleep	A little more sleep can go a long way. Try going to bed 15 minutes earlier tonight.
39	Sleep	Let's get friendly with that snooze button. Shut those eyes a little longer each night for vibrant skin, more energy, better mood, and increased menstrual regularity.
40	Sleep	Let's get friendly with that snooze button. Shut those eyes a little longer each night for vibrant skin, more energy, better mood, and increased menstrual regularity.
41	Sleep	
42	Water	Even big changes start with little steps. Can you drink just one more glass of water today?
43	Water	You're halfway to ideal hydration. Treat yourself to a glass or warm water with lemon when you wake up tomorrow morning!
44	Water	You're halfway to ideal hydration. Treat yourself to a glass or warm water with lemon when you wake up tomorrow morning!
45	Water	Mix up your water routine so you don't get bored - add sliced cucumber, mint, strawberries, lemon, or chamomile to sparkling water for a refreshing treat.

1212

1213

FIG. 12B (Cont.)

1213	46	Water	Mix up your water routine so you don't get bored - add sliced cucumber, mint, strawberries, lemon, or chamomile to sparkling water for a refreshing treat.
	47	Water	
1214	48	Veggies	Getting more veggies in your diet starts with getting them to your house. Next time you're at the grocery store, shop on the outside (fresh produce, butcher, seafood, etc...) and stay out of the aisles.
	49	Veggies	Need help getting more veggies in your diet? Always serve the veggies first and make sure that half your plate gets filled with veggies before anything else goes on.
	50	Veggies	Need help getting more veggies in your diet? Always serve the veggies first and make sure that half your plate gets filled with veggies before anything else goes on.
	51	Veggies	Start your day with a veggie boost. Green smoothies and fresh squeezed juices are a great way to sneak in a couple extra servings of veggies every day.
	52	Veggies	Start your day with a veggie boost. Green smoothies and fresh squeezed juices are a great way to sneak in a couple extra servings of veggies every day.
	53	Veggies	
1215	54	Energy	Low energy is one of the biggest indicators that the Tired hurdle is still in your way. Usually it's also an indicator that something is lacking in diet, hydration, or sleep. Pay particular attention to where your lifestyle scores are lowest and get to work!
	55	Energy	Low energy is one of the biggest indicators that the Tired hurdle is still in your way. Usually it's also an indicator that something is lacking in diet, hydration, or sleep. Pay particular attention to where your lifestyle scores are lowest and get to work!

FIG. 12C

56	Energy	To be your most Conceivable self, we need you brimming with energy. After all, baby making is a lot of work! It sounds like you're struggling with the Tired hurdle. Pay attention to sleep, diet, and hydration and things should slowly improve!
57	Energy	To be your most Conceivable self, we need you brimming with energy. After all, baby making is a lot of work! It sounds like you're struggling with the Tired hurdle. Pay attention to sleep, diet, and hydration and things should slowly improve!
58	Energy	Keep your energy levels high by getting good rest and eating nutrient rich foods.
59	Stress	Serenity is not freedom from the storm, it is peace within it. Find time today to take 5 deep breaths, and think of one thing that can make your life more peaceful.
60	Stress	Serenity is not freedom from the storm, it is peace within it. Find time today to take 5 deep breaths, and think of one thing that can make your life more peaceful.
61	Stress	Move more! When your body's stagnant, your mood gets stagnant too. Try going for a walk, taking a yoga class, getting a massage, anything that engages your body and soothes the mind.
62	Stress	Move more! When your body's stagnant, your mood gets stagnant too. Try going for a walk, taking a yoga class, getting a massage, anything that engages your body and soothes the mind.
63	Stress	
64	Digestion	Congee (the Chinese version of oatmeal) is a great way to boost your metabolism and heal your digestive system. Try it for breakfast this week!
65	Digestion	Congee (the Chinese version of oatmeal) is a great way to boost your metabolism and heal your digestive system. Try it for breakfast this week!

1215

1216

1217

FIG. 12C (Cont.)

66	Digestion	Congee (the Chinese version of oatmeal) is a great way to boost your metabolism and heal your digestive system. Try it for breakfast this week!
67	Digestion	Try mixing a tablespoon of apple cider vinegar with a small glass of water to treat occasional heartburn.
68	Digestion	A glass of chamomile or ginger tea can calm an angry tummy. Also make sure you avoid common irritants like coffee, alcohol, and spicy foods.
69	Digestion	
70	Sleep Quality	Avoid caffeinated beverages or eating food too close to going to sleep. Asking your body to process these things while you are sleeping will cause disruptions to your sleep.
71	Sleep Quality	Avoid using your phone or bright screen activity in bed before you go to sleep.
72	Sleep Quality	
73	Mood	Move more! When your body's stagnant, your mood gets stagnant too. Try going for a walk, taking a yoga class, getting a massage, anything that engages your body and soothes the mind.

1217 {

1218 {

1219 {

FIG. 12D

74	Mood	Fear is a natural emotion, and one that's perfectly acceptable to feel! By identifying our fears we can create strategies to navigate them. What's one thing you're afraid of? How can that fear motivate you to make positive changes in your life?
75	Mood	
76	Mood	Move more! When your body's stagnant, your mood gets stagnant too. Try going for a walk, taking a yoga class, getting a massage, anything that engages your body and soothes the mind.
77	Mood	We can learn to silence the mind, but it takes practice. That's what meditation is all about. Start by closing your eyes and focusing on the breath. Count your breaths on the exhale up to 10. Just focus on the breath. Find time to do this once or twice a day.
78	Elimination	Congee (the Chinese version of oatmeal) is a great way to boost your metabolism and heal your digestive system. Try it for breakfast this week!
79	Elimination	
80	Elimination	Congee (the Chinese version of oatmeal) is a great way to boost your metabolism and heal your digestive system. Try it for breakfast this week!

FIG. 14

CONCEIVABLE BASAL BODY TEMPERATURES AND MENSTRUAL CYCLE

CROSS-REFERENCE TO RELATED APPLICATIONS

[0001] None.

FIELD

[0002] The present invention is generally related to fertility, and more particularly, to software programs, systems and methods for increasing the chances of conception by combining best practices as described by current medical literature for fertility changes along with herbal recommendations to address any underlying fertility issues to move toward an ideal fertility state for each individual user.

BACKGROUND

[0003] Basal body temperature (“BBT”) charting has been a popular method for natural family planning and ovulation prediction for the last 40 years. Currently there are many applications, for example smart phone Applications that use technology to collect and aggregate this BBT data. The information gleaned from temperature changes across the menstrual cycle can highlight a surge in luteinizing hormone (LH) which is an early predictor of ovulation. This data is limited in its usefulness because it can only predict ovulation, but there are many other aspects of the BBT that can be useful in highlighting other important subclinical factors that can impact a woman’s ability to conceive. Conventional thinking assumes that if the BBT chart is biphasic and has a 1-3 tenth of a temperature drop at ovulation, the chart is considered normal. Additionally, these Applications largely ignore menstrual parameters as measures to indicate subclinical indicators of a sub-fertile state. Absent was a method for a woman to use technology to collect, aggregate and assess BBT info and essential menstrual parameters as indicators of overall fertility or fertility potential.

[0004] Some existing Applications have attempted to improve the accuracy of ovulation prediction by adding BBT charting the collection of other symptoms like cervical discharge, cervical height and mood.

[0005] These solutions still fail to utilize important and highly relevant BBT and menstrual cycle data that can be used to reveal underlying fertility issues. Identifying the exact timing of ovulation is very useful for women who are fertile, but who do not know when to have intercourse. But for women who have identified clinical or subclinical fertility issues, this data is insufficient to be a resource for improving their fertility.

[0006] Thus there is a need for alternative strategies and regimes to increase fertility by moving a user’s personalized fertility state toward an ideal fertility state.

SUMMARY

[0007] It is an object of the invention to maximize a user’s fertility potential by providing a software program, such as The Conceivable Software Program, that combines a proprietary methodology for identifying the underlying causes of infertility with the proven use of herbal formulas, and intelligent, personalized wellness recommendations that give the individual user the power to improve their natural fertility without costly intervention.

[0008] For a user to reach their maximum fecundity, the Conceivable Software Program uses user provided information to provide a user’s Conceivable Potential score **1000**, shown in FIG. 10. The Conceivable Potential score accumulates a variety of fertility metrics, described herein, that the user tracks in the Conceivable Software Program, and measures the improvements in key lifestyle, BBT, and menstrual cycle metrics. The Conceivable Software Program focuses on a number of health factors, including: Conceivable Hurdles **1001**, Basal Body Temperature **1002**, Cycle Health **1003**, Lifestyle **1004** and Herbal Formulas **1005**.

[0009] For the Conceivable Hurdles, the inventors analyzed data from over 7,000 women and discovered five critical fertility hurdles the user’s body must clear in order to conceive that compromise fecundability. Use of the Conceivable Software Program identifies the user’s hurdles and creates a personalized plan to steadily remove the user’s roadblocks increase users’ propensity to conceive.

[0010] For the Basal Body Temperature (“BBT”), the Conceivable Software Program goes beyond using BBT as an ovulation predictor. The inventors identified a specific BBT curve that is ideal for conception. Use of the Conceivable Software Program to helps the user understand the relationship between their BBT and their propensity to conceive, and adjust their temperatures into their ideal range.

[0011] For the Cycle Health, various characteristics of the user’s menstrual cycle provide strong signals related to their natural fertility. The Conceivable Software Program helps them measure these factors, understand how they relate to their reproductive health, and take proactive steps to improve them.

[0012] For Lifestyle, factors like hydration, sleep and diet are the most important things user can control to improve their fertility. The Conceivable Software Program helps them make the right choices every day to maximize their fertility, based on the Conceivable Software Program’s assessment of user entered data.

[0013] The Herbal Formulas are one of the key items to maximize user’s fertility. Users using the Conceivable Software Program have access to a unique and powerful line of Herbal Formulas that the Conceivable Software Program formulates and recommends especially for the individual users. The Conceivable Software Program in combination with the Herbal Formulas helps users move toward their maximum fecundity.

BRIEF DESCRIPTION OF THE DRAWINGS

[0014] These and other features, aspects and advantages of the present application are described with reference to drawings of certain embodiments, which are intended to illustrate, but not to limit, the various inventions disclosed herein. It is to be understood that the attached drawings are for the purpose of illustrating concepts and embodiments of the present application and may not be to scale.

[0015] FIG. 1 shows an example of an ideal chart in which the temperatures remain stable throughout the body of the follicular phase.

[0016] FIGS. 2 and 3 show charts that demonstrate pathological departures from an ideal, fertile basal body temperature state shown in FIG. 1.

[0017] FIG. 4 shows an example of an ideal chart for the BBT state for the luteal phase in which the temperatures to climb quickly after ovulation to an average of 98.2 degrees F.

[0018] FIG. 5 shows a chart that demonstrates pathological departures from an ideal, fertile basal body temperature state shown in FIG. 5.

[0019] FIG. 6 shows a chart that demonstrates a pattern in which BBT rises to an appropriate level, but fails to maintain that level throughout the luteal phase.

[0020] FIG. 7 shows an erratic BBT chart in the luteal phase.

[0021] FIG. 8 shows how the user identifies the menstrual cycle day and phase, including, Bleeding, Follicular and Luteal.

[0022] FIG. 9 shows the user selection of a base herbal formula selected to match the phases of Bleeding, Follicular, and Luteal.

[0023] FIG. 10 shows one example of a Conceivable Potential score from a variety of fertility metrics that the user tracks in the Conceivable Software Program, and measures the improvements they are making. The Conceivable Software Program focuses on a number of health factors, including: Conceivable Hurdles, Basal Body Temperature, Cycle Health, Lifestyle and Herbal Formulas.

[0024] FIGS. 11A-11E show various worksheets used as input for the Conceivable Formulas. This information is used in the Conceivable Formula algorithm to interpret the collected data and to recommend actionable changes for the individual users to improve their fertility cycle

[0025] FIGS. 12A-12D show example recommendations the user can make for a number of conditions, include Clotting, Cramping, Volume, Color, Ovulation, Cervical Fluid, PMS Severity, PMS Symptoms, Spotting, Follicular Temperature, Luteal Temperature, Sleep, Water, Veggies, Energy, Stress, Digestion, Sleep Quality, Mood and Elimination.

[0026] FIGS. 13A-13B show one example of the Triggers that may be experienced by the user.

[0027] FIG. 14 shows one example of a menstrual cycle of 28 cycle days ("CD") long, including the Trigger Event, Period and the Trigger Field.

DETAILED DESCRIPTION

[0028] The ideal menstrual cycle for conception combines certain basal body temperature and menstrual cycle parameters. The applicants have termed this ideal menstrual cycle description as "The Conceivable Basal Body Temperatures and Menstrual Cycle" and disclosed some embodiments and examples of some ideal parameters in the application. Although several embodiments and examples are disclosed herein, the present application extends beyond the specifically disclosed embodiments to other alternative embodiments and/or uses of the inventions and modifications and equivalents thereof. It is also contemplated that various combinations or subcombinations of the specific features and aspects of the embodiments may be made and still fall within the scope of the inventions. Accordingly, it should be understood that various features and aspects of the disclosed embodiments can be combined with or substituted for one another in order to form varying modes of the disclosed inventions. Thus, it is intended that the scope of the present inventions herein disclosed should not be limited by the particular disclosed embodiments and examples described herein, but should be determined only by a fair reading of the claims that follow.

[0029] Embodiments of the invention will now be described with reference to the figures, wherein like numerals reflect like elements throughout. The terminology used in the

description presented herein is not intended to be interpreted in any limited or restrictive way, simply because it is being utilized in conjunction with detailed description of certain specific embodiments of the invention. Furthermore, embodiments of the invention may include several novel features, no single one of which is solely responsible for its desirable attributes or which is essential to practicing the invention described herein.

[0030] The Conceivable Basal Body Temperatures and Menstrual Cycle

[0031] Basal body temperature ("BBT") reflects hormone function and underlying issues that impact a woman's fertility. When BBT's average 97.3 degrees F. for the first 14 days of the cycle and 98.2 degrees F. after ovulation, a woman's fertility potential is optimized. Any percentage deviation from these norms may indicate a larger issue.

[0032] An ideal menstrual cycle is 28 cycle days ("CD") long, with ovulation occurring on CD 14, with stretchy, abundant, clear cervical discharge, no PMS, bleeding that last 4 days (no more, no less) with fresh red blood, absent of clotting, and with no accompanying cramping.

[0033] The inventors have developed a software program ("The Conceivable Software Program") that uses technology to aggregate basal body temperature taken by the user with the aforementioned menstrual parameters to identify the sub-clinical issues that may be impacting her fertility.

[0034] The current solutions described in the Background use technology in a very limited fashion that may only track basal body temperatures, cervical discharge, cervical height and mood to predict ovulation. That is their only offering. By only looking at the temperature differential around ovulation, many opportunities are lost to collect valuable data that can actually direct the user to take very specific action to improve the factors that are impacting their fertility.

[0035] The Conceivable Software Program

[0036] The Conceivable Software Program is more than an ovulation tracker. The Conceivable Software Program is a powerful application that helps the user identify and address underlying issues that may be preventing them from conceiving and uses the deviations from a prescribed "ideal fertility state" to determine the subclinical factors impacting a woman's fertility.

[0037] The Conceivable Software Program is unique and proprietary for several reasons. The invention is the first to use BBT's and menstrual parameters as an assessment tool/prognostic indicator for a women's fertility. The Conceivable Software Program is also the first to develop an algorithm to interpret the collected data and to recommend actionable changes by combining best practices as described by current medical literature and Herbal Formulas to make changes for the user. The Conceivable Software Program combines recommendations of best practices as described by current medical literature for changes (see FIGS. 12A-12E) along with herbal recommendations (see FIG. 9) to address the underlying fertility issues to move toward the ideal fertility state.

[0038] The Conceivable Software Program is personalized care, outside the clinic. As the user shares data with the Conceivable Software Program, they'll receive personalized recommendations, lifestyle guidance, herbal recommendations and accountability reminders, helping them make steady progress.

[0039] The Conceivable Software Program is a mobile application that can be installed on many portable electronic devices, from portable computers to smartphones (such as

androids or i-phones/i-pads). The Conceivable Software Program helps the user reach their maximum fertility by using the information input by the user, as described above, combined with the personalized herbal formulas identified and recommended by the software program for the individual user, as well as lifestyle recommendations.

[0040] The Conceivable Software Program will motivate and inspire the user, by showing them the progress they are making toward maximum fertility. It's easy to monitor their improvement each day, and from cycle to cycle.

[0041] The Conceivable Software Program allows the user to understand the connections of fertility. By capturing lifestyle data and key fertility metrics in a single application, the Conceivable Software Program helps the user clearly understand how their lifestyle choices affect their ability to conceive, and empowers them to take action that maximizes the user's natural fertility.

[0042] The Conceivable Software Program may be also be integrated with fertility acupuncture care and/or other complementary, alternative, holistic, or allopathic fertility care and/or wellness providers and/or clinics. The Conceivable Software Program may be offered through fertility acupuncture clinics. The Conceivable Software Program Conceivable technology makes it easy for the user to capture the fertility, menstrual and wellness metrics that matter most to the care they receive at their fertility acupuncture clinic.

[0043] The Conceivable Software Program uses the deviations from a prescribed "ideal fertility state" to determine the subclinical factors impacting a woman's fertility. One example of an ideal fertility state consists of:

[0044] a 28 day menstrual cycle days ("CD")

[0045] ovulation occurring on CD 14

[0046] abundant, clear, stretchy, cervical discharge on CD 14

[0047] absence of Premenstrual syndrome ("PMS")

[0048] 4 days of menstrual bleeding

[0049] enough menstrual blood to soak a tampon or pad every 4 hours

[0050] no pain, cramping, clotting or spotting before, during, or after period

[0051] Basal body temperature (BBT):

[0052] CD 4-14 temperatures need to average 97.3 degrees F. with a standard deviation of less than 0.1 degrees F.

[0053] CD 17-28 temperatures need to average 98.2 degrees F. or higher with a standard deviation of less than 0.01 degrees F.

[0054] An Explanation of BBT as it Relates to an Ideal Fertility State.

[0055] Follicular Phase:

[0056] The follicular phase is the first part of the ovarian cycle. During this phase, the ovarian follicles mature and get ready to release an egg.

[0057] FIG. 1 shows an example of an ideal chart 100 in which the Basal Body Temperatures ("BBT") 105 remain stable throughout the body of the follicular phase 110. The BBT should fall within 97.2-97.4 degrees F. In this range, good quality eggs are produced along with abundant, clear, and stretchy (fertile) cervical fluid. Temperatures that fall outside this range can be corrected through lifestyle and herbal interventions.

[0058] FIGS. 2 and 3 show charts that demonstrate pathological departures from an ideal, fertile BBT state described above in FIG. 1.

[0059] FIG. 2 shows an erratic chart 200 where BBT 205 varies wildly and ovulation occurs late in the follicular phase 210. This is a common pattern for women who experience irregular ovulation and is a good indicator for hormonal imbalance, specifically the interaction between estradiol and follicle-stimulating hormone ("FSH"). This is also a common pattern for women who suffer from Polycystic ovary syndrome (PCOS).

[0060] FIG. 3 shows a chart 300 with an elevated BBT 305 in the follicular phase 310. Elevated temperatures in this phase are associated with poor egg quality, scanty cervical fluid, and elevated levels of FSH and poor ovarian response or diminished ovarian reserve.

[0061] Luteal Phase:

[0062] The luteal phase is the latter phase of the ovarian cycle. The main hormone associated with this phase is progesterone. During the luteal phase progesterone production must be sufficient to stabilize the uterine lining and allow implantation of the fertilized embryo to occur.

[0063] FIG. 4 shows an example of an ideal chart 400 for the BBT state for the luteal phase 410 in which the BBT 405 climbs quickly after ovulation to an average of 98.2 degrees F. 415. Temperatures that consistently fall below this ideal average indicate insufficient progesterone function. Insufficient progesterone leads to lower pregnancy rates and higher miscarriage rates. BBT's lower than ideal can be corrected through a combination of lifestyle and herbal interventions (as discussed below).

[0064] FIG. 5 shows a chart 500 that demonstrates pathological departures from an ideal, fertile BBT state. This chart demonstrates a pattern in which the BBT 505 fails to rise to an appropriate level 515 (98.2 degrees F. or higher) for the luteal phase 510. This can indicate a progesterone deficiency that is associated with decreased fecundability and higher miscarriage rates.

[0065] FIG. 6 shows a chart 600 that demonstrates a pattern in which BBT 605 rises to an appropriate level 615, but fails to maintain that level throughout the luteal phase 610. This fall in BBT 605a is associated with a fall in progesterone levels and can lead to early term miscarriage or implantation failure. This type of pattern may also result in premenstrual spotting.

[0066] FIG. 7 shows an erratic BBT chart 700 in the luteal phase 710. This erratic BBT 705 demonstrates a pattern of hormonal imbalance that is generally associated with PMS.

[0067] By assessing BBT patterns, the Conceivable Software Program identifies subclinical patterns of infertility and offers interventions that can address these patterns.

[0068] The Conceivable Software Program Assessment Process.

[0069] 1. The Conceivable Software Program prompts user to report on the state of the aforementioned conditions, as shown in the charts. The Conceivable Software Program uses a proprietary scale to determine the user's personalized fertility state to score the severity of the deviations from the ideal fertility state. The user inputs data in the software program, for example, menstrual parameters, lifestyle factors, and BBT's.

[0070] 2. By algorithmically assessing the collected data, the software can identify subclinical factors and their causes that inhibit a woman's fertility. The data may include, but is not necessarily limited to, high, low, or erratic BBT across the menstrual cycle, menstrual clotting, menstrual pain, insufficient menstrual flow,

hemorrhagic menstrual flow, insufficient cervical discharge, irregular ovulation, symptoms associated with PMS such as bloating, irritability, headaches, breast tenderness, and cramping, and spotting.

[0071] 3. Once the data has been aggregated, the software assigns the user a “Hurdle” or “Hurdles” of one or more symptoms that represent the underlying cause for the subclinical factors.

[0072] The Hurdles and their main associated symptoms are:

[0073] Hot—high follicular phase basal body temperatures, scanty cervical discharge, insomnia (harder to stay asleep).

[0074] Cold—low luteal phase basal body temperatures, cold hands and feet, frequent urination

[0075] Stuck—PMS, erratic temperatures across the cycle, irritability

[0076] Pale—scanty menstrual blood, anxiety, pale skin

[0077] Tired—fatigue, gas and bloating, loose stools, weight gain or retention

[0078] The Conceivable Software Program Hurdle Functions.

[0079] 4. After the User Hurdle or Hurdles are assigned, the software program recommends herbal formulas according to the phases of the menstrual cycle to support fertility wellness. Examples of the goal for each phase may include the following:

[0080] Bleeding—Remove old, clotty, or stale uterine lining through menstrual bleeding, decrease menstrual pain, improve uterine blood flow, support production of a healthy amount of uterine bleeding.

[0081] Follicular—Regulate BBT, build a healthy and sufficient new uterine lining, regulate ovulation, promote a healthy environment for follicular development and egg maturation.

[0082] Luteal—Regulate BBT, enhance progesterone function, stabilize uterine lining, maintain pregnancy.

[0083] The Conceivable Software Program Herbal Recommendations.

[0084] 5. Once the User Hurdle function is complete, the software program calculates a “Conceivable Potential Score” based on the menstrual parameters, BBT’s, and lifestyle behaviors. The Conceivable Software Program makes herbal recommendations based on the Hurdle or Hurdles to address the underlying fertility issues to move the user’s personalized fertility state toward the ideal fertility state. The user is fully engaged in all of the behaviors that have been demonstrated by the medical literature to make the biggest difference in fertility outcomes.

[0085] The Conceivable Software Program Fertility Scoring.

[0086] 6. Everyday the user should enter the new data so that the software can constantly recalculate their “Conceivable Potential Score” and provide feedback to the user to make any changes. The software has the ability to notice what the user is doing and not doing in terms of the recommendations and then can “push” education and suggestions to the user to facilitate positive behavior modification.

[0087] The Conceivable Software Program Personalized Lifestyle Interventions Based on Program Input.

[0088] 7. The Conceivable Software Program may also have the ability to take the aggregated data and makes a

customized wellness program that includes sleep, hydration, and nutrition specifically designed according to the users underlying causes or issues around their infertility.

[0089] Herbal System to Address the Underlying Fertility Issues to Move Toward the Ideal Fertility State.

[0090] The following description illustrates some examples of actionable changes the user may do to move their personalized fertility state toward the ideal fertility state using herbs exclusively selected for them to address their condition.

[0091] 1. Identify Menstrual Cycle Day and Phase—

[0092] The user identifies the menstrual cycle day and phase, as shown in FIG. 8 As discussed above, the phase is as follows:

[0093] Bleeding 805—Remove old, clotty, or stale uterine lining through menstrual bleeding, decrease menstrual pain, improve uterine blood flow, support production of a healthy amount of uterine bleeding.

[0094] Follicular 810—Regulate BBT, build a healthy and sufficient new uterine lining, regulate ovulation, promote a healthy environment for follicular development and egg maturation.

[0095] Luteal 815—Regulate BBT, enhance progesterone function, stabilize uterine lining, maintain pregnancy.

[0096] 2. Selection of a Base Herbal Formula—

[0097] Based on the user’s cycle and Conceivable Hurdle (s), a base herbal formula is identified and selected by the software program for the individual user 900 to match the phases, Bleeding 905, Follicular 910, and Luteal 915, as shown in FIG. 9. Below are some examples of some herbs that may be used for the base formulas.

[0098] For Bleeding 905, some examples of base herbal formulas may include:

[0099] Release 906—Builds blood and resolves blood stasis in the lower jiao.

[0100] For Follicular 910, some examples of base herbal formulas may include:

[0101] Enrich 911—Builds blood and resolves blood stasis in the lower jiao.

Release		
Pin Yin	Latin	English Common
Shu Di Huang	Radix Rehmanniae	Cooked <i>Rehmannia</i>
Dang Gui	Radix Angelicae	<i>Angelica</i> root

Bo He	Herba Menthae	Mint

[0109] The Conceivable Formula Worksheets (Collected Data)

[0110] FIGS. 11A-11E show various worksheets used as input for the Conceivable Formulas. This information is used in the Conceivable Software Program algorithm to interpret the collected data and to recommend actionable changes for the individual users to improve their fertility cycle.

[0111] FIG. 11A shows the Conceivable Potential Scores **1100** including Cycle Health **1105** (30), BBT **1110** (40), Profile **1115** (10) and Lifestyle **1120** (20), which adds up to the Total Score **1125** (100).

[0112] FIG. 11B shows one example of the input that the user would put in for Cycle Health Scores **1130** for each of the following categories: Length of period **1131** (20), Days Bleeding **1132** (15), blood Color **1133** (10), Clotting **1134** (10), Volume **1135** (15), Cramping **1136** (10), PMS **1137** (10) and Cervical Fluid **1138** (10).

[0113] As shown on the worksheet, the user will enter the scoring for each of the categories based on their personal information to determine their total Cycle Health Score **1139**. Each of the categories has a scoring metric used to determine the score for that particular section. For the Cycle Health Scores **1130** there are many facets to cycles that affect fertility, and what a lot of women consider “normal” are actually indications of larger problems. Each of the categories has a perfect score that can vary depending on the user. Below are the categories, with the perfect score in parenthesis next to the category, with the range changes from the perfect score shown in FIG. 11B.

[0114] Length of the cycle (20)—A perfect score of 20 is a 28 day cycle. For every day above or below 28 the score drops, as shown in FIG. 11B.

[0115] Days Bleed (15)—A perfect score of 15 is 4 days. More or less days lowers the score, as shown in FIG. 11B.

[0116] Blood Color (10)—A fresh color is a perfect score of 10. As the color changes, the score goes down, as shown in FIG. 11B.

[0117] Clotting (10)—A perfect score is no clotting, receiving a score of 10. If there is clotting, the size of the clot, dime to half dollar size, lowers the score, as shown in FIG. 11B.

[0118] Blood Volume (15)—The volume soaks in a pad of 4 gets a perfect score of 15. More or less lowers the score, as shown in FIG. 11B.

[0119] Cramping (10)—No cramping gets a perfect score of 10. As more cramping occurs, the score goes down, as shown in FIG. 11B.

[0120] PMS (10)—The severity of PMS determines the score. No PMS gets a perfect score or 5 and the scores is reduced as PMS becomes more severe, as shown in FIG. 11B.

[0121] Cervical Fluid (10) has three components, copious, clear and sticky. If all three exist and are correct, each gets a score of 3 and there is a bonus point of 1 that gives it a perfect score (10), as shown in FIG. 11B.

[0122] FIG. 11C shows one example of the input that the user would put in for Basal Body Temperature (“BBT”) scores **1140** for each of the following categories: Volatility **1141** (20), Average Follicular Temp **1142** (20), Average Luteal Temp **1143** (20), Follicular Length (20) **1144** and Luteal Length **1145** (20). As shown on the worksheet, the user will enter the scoring for each of the categories based on their personal information to determine their total Basal Body

Temperature Score **1146**. Each of the categories has a scoring metric used to determine the score for that particular section. While no one has the perfect cycle, the use of the Conceivable Software Program should be able to get the user closer. Each of the categories has a perfect score that can vary depending on the user. Below are the categories, with the perfect score in parenthesis next to the category, with the range changes from the perfect score shown in FIG. 11C.

[0123] Volatility (20)—SD=0.1 is a perfect score of 20. As SD gets larger, the points go down, as shown in FIG. 11C.

[0124] Average Follicular Phase Temp (20)—The ideal temperature for the Follicular Phase is 97.2-4, which is a perfect score of 20. As the temperature goes up or down from this number, the score is reduce, as shown in FIG. 11C.

[0125] Average Luteal Phase Temp (20)—The ideal temperature for the Luteal Phase is 98.2+ for a score of 20. As the temperature goes down, the score is reduces, as shown in FIG. 11C.

[0126] Follicular Length (20)—The ideal Follicular length is 10 days, for a score of 20. The score is reduced for longer or shorter Follicular length, as shown in FIG. 11C.

[0127] Luteal Length (20)—The ideal Luteal length is 15+ days, for a score of 20. The score is reduced for shorter Luteal lengths, as shown in FIG. 11C.

[0128] FIG. 11D shows one example of the input that the user would put in for Profile Scores **1150** for each of the following categories: Hot **1151** (15), Cold **1152** (15), Stuck **1153** (15), Pale **1154** (15), Tired **1155** (15), Energy **1156** (5), Digestion **1157** (5), Elimination **1158** (5), Sleep Quality **1159** (5) and Mood **1160** (5). As shown on the worksheet, the user will enter the scoring for each of the categories based on their personal information to determine their total Profile score **1161**.

[0129] The Fertility profile gives insight into some of the underlying issues that may be affecting the user’s fertility. While no one has the perfect cycle, the use of the Conceivable Software Program should be able to get the user closer. Each of the categories has a perfect score that can vary depending on the user. Below are the categories, with the perfect score in parenthesis next to the category, with the range changes from the perfect score shown in FIG. 11D.

[0130] Hot (15) might include high follicular phase basal body temperatures, scanty cervical discharge, insomnia (harder to stay asleep)—a perfect score of 15 is 0 hot. The score decreases as the hot increases, as shown in FIG. 11D.

[0131] Cold (15) might include low luteal phase basal body temperatures, cold hands and feet, frequent urination—a perfect score of 15 is 0 cold. The score decreases as the cold increases, as shown in FIG. 11D.

[0132] Stuck (15) might include PMS, erratic temperatures across the cycle, irritability—a perfect score of 15 is 0 stuck. The score decreases as the stuck increases, as shown in FIG. 11D.

[0133] Pale (15) might include scanty menstrual blood, anxiety, pale skin—a perfect score of 15 is 0 pale and score decreases as the pale increases, as shown in FIG. 11D.

[0134] Tired (15)—a perfect score of 15 is 0 for tired and decreases as the user gets tired, as shown in FIG. 11D.

- [0135] Energy (5) might include fatigue or the amount of energy the user has and is ranked by the user between 1-5, 5 being high energy and the score decreasing as the energy level goes down, as shown in FIG. 11D.
- [0136] Digestion (5) might include gas and bloating, which receives a max score of 5 for normal digestion and a score of 0 for any other, as shown in FIG. 11D.
- [0137] Elimination (5) might include loose stool, which receives a max score of 5 for normal elimination and a score of 0 for any other, as shown in FIG. 11D.
- [0138] Sleep Quality (5) receives a max score of 5 for normal sleep quality and a score of 0 for any other, as shown in FIG. 11D.
- [0139] Mood (5) receives a max score of 5 for if happy and a score of 0 for any other mood, as shown in FIG. 11D.
- [0140] FIG. 11E shows one example of the input that the user would put in for Lifestyle Scores 1170 for each of the following categories: Herbs 1171 (40), Sleep 1172 (30), Hydration 1173 (15) and Diet 1174 (15). As shown on the worksheet, the user will enter the scoring for each of the categories based on their personal information to determine their Lifestyle score 1175. Below are the categories, with the perfect score in parenthesis next to the category, with the range changes from the perfect score shown in FIG. 11E.
- [0141] Herbs (40) the herbs need to be taken every day. To get the maximum score of 40, the user does not miss any days. As days are missed, the score decreases, as shown in FIG. 11E. Miss one day, -1, miss two days, -3, miss three days, -5, as shown in FIG. 11D.
- [0142] Sleep (30)—The body needs sleep and the more sleep the better. A maximum score is achieved if the user sleeps more than eight hours (8+). As the number of sleep hours decrease, so does the score, as shown in FIG. 11D.
- [0143] Hydration (15)—The body needs hydration and the more the better. A maximum score is achieved if the user 8+ eight oz glasses of water per day. As the number of sleep drinks decrease, so does the score, as shown in FIG. 11D.
- [0144] Diet (15)—The body needs a good diet. A maximum score is achieved if the diet is good, such as 8+ servings of veggies a day. As the diet decrease, so does the score, as shown in FIG. 11D.
- [0145] After the user enters the data from the Conceivable Formula worksheets (Collected data) into the Conceivable Software Program, the program will calculate a Conceivable Potential score. The Conceivable Potential score is a measure on how close they are to their optimal fecundability. An ideal score is 100. The Conceivable Software Program will make suggestions on how the user can increase their fertility score so that they may move from the user's personalized fertility state toward the ideal fertility state. The optimum goal is to make the correct changes to their lifestyle to increase their chance of conception with the use of herbs.
- [0146] FIGS. 12A-12D show many example recommendations the user can make for a number of conditions that may be preventing them from moving toward the ideal Fertility Profile. The examples show different conditions that may be changed including: Clotting 1201, Cramping 1202, Volume 1203, Color 1204, Ovulation 1205, Cervical Fluid 1206, PMS Severity 1207, PMS Symptoms 1208, Spotting 1209, Follicular Temperature 1210, Luteal Temperature 1211, Sleep 1212, Water 1213, Veggies 1214, Energy 1215, Stress 1216, Digestion 1217, Sleep Quality 1218, Mood 1219 and Elimination 1220.
- [0147] FIGS. 13A-13B show one example of the Triggers that may be experienced by the user, including: trigger_id 1301, trigger_comparison 1302, trigger_field 1303, period 1304, trigger_name 1305, trigger_event 1306, Notes 1307 and trigger_value 1308.
- [0148] FIG. 14 shows one example of a user's menstrual cycle of 28 cycle days ("CD") long, including the Trigger Event 1401, Period 1402 and the Trigger Field 1403. In this example, the Trigger Field 1403 shows what is happening on each of the 28 cycle days.
- [0149] One Example of Using the Conceivable Software Program
- [0150] The Conceivable Software Program includes many different settings to help or remind the user to do different things to enter important information into the software program. The software program instructs the user to input data at critical times to accurately determine the correct fertility score. This information is used to help the user alter or change their lifestyle to increase the chance of fertility. After the information is entered, the software program determines a score for the user and then may make suggestions on how the user can increase their fertility score by lifestyle changes and herbs.
- [0151] Below is an example of the type of Tracking information that is input into the Conceivable Software Program. At different points during the monthly cycle, different information may be input into the Conceivable Software Program.
- [0152] A) Basal Body Temperature ("BBT")
- [0153] BBT—When first logging on the user might receive a message for BBT: "First thing in the morning, before getting out of bed, take your temperature. Try recording your temperature around the same time every morning."
- [0154] B) Daily Recording to the Conceivable Software Program
- [0155] Sleep—"How many hours of sleep did you get last night?: 3-8+"
- [0156] Water—"How many 8 oz glasses of water did you drink today?: 1-8+"
- [0157] Veggies—"How many servings of veggies did you eat today?: 1-8+"
- [0158] Digestion—"What are you experiencing most?"
- [0159] Bloating
- [0160] Gas
- [0161] Nausea
- [0162] Heartburn
- [0163] Stomach ache
- [0164] It's good!
- [0165] Energy—"Rate the amount of energy you have: 1-5"
- [0166] Stress—"Rate the amount of stress you are experiencing: 1-5"
- [0167] C) Herbs
- [0168] "Check your bottle for dosage, or contact your practitioner with any questions. Check Morning, Noon and Night."
- [0169] D) Cycle
- [0170] Cervical Discharge—"You may be close to ovulation, do you have abundant, clear and sticky discharge?"

[0171] E) Profile

[0172] Fertility Profile—"Your fertility profile gives us insight into some of the underlying issues that may be affecting your fertility. Let's dig in a little deeper to get a better idea of how you're feeling. Answer the questions below."

[0173] Elimination—"What do you experience most in elimination?"

[0174] Loose Stool

[0175] Regular/formed

[0176] Constipated

[0177] Sleep—"How's your sleep been?"

[0178] trouble falling asleep

[0179] pretty good

[0180] trouble staying asleep.

[0181] Mood—"What mood has been the most prevalent for you?"

[0182] Irritable/Angry

[0183] Anxious

[0184] Depressed

[0185] Happy/Joy

[0186] Worried

[0187] N/A

[0188] F) Bleeding

[0189] The user should also keep track of bleeding, such as when there is spotting or the start of the period (bleeding cycle).

[0190] The Conceivable Software Program may also include different alarms (that can be turned on and off) to give the user reminders. For example the software program may include:

[0191] Herb Reminder

[0192] Morning (user may set the reminder time)

[0193] Afternoon (user may set the reminder time)

[0194] Evening (user may set the reminder time)

[0195] BBT Reminder (user may set the reminder time)

[0196] Tracking Information, such as discussed above (user may set the reminder time)

[0197] Conceivable Software Program may also provide educational information for the user to help educate them on the different items happening during the cycle. For example:

[0198] Cycle Health—There are many facets to cycles that affect fertility, and what a lot of women consider "normal" are actually indications of larger problems. While no one has the perfect cycle, the use of the Conceivable Software Program should be able to get the user closer.

[0199] Blood Color

[0200] Clotting

[0201] Blood Volume

[0202] Cramping

[0203] PMS

[0204] Cervical Fluid

[0205] Basel Body Temperature (BBT)

[0206] BBT In The Follicular Phase

[0207] BBT In The Luteal Phase

[0208] Adjusting Your BBT

[0209] Fertility Hurdles

[0210] Fertility Hurdles

[0211] The Pale Hurdle

[0212] The Tired Hurdle

[0213] The Stuck Hurdle

[0214] The Hot Hurdle

[0215] The Cold Hurdle

[0216] Digestion And Elimination

[0217] Energy

[0218] Sleep

[0219] Mood

[0220] Lifestyle

[0221] Water

[0222] Veggies

[0223] Acupuncture

[0224] Pregnancy

[0225] As the information is entered, the Conceivable Software Program keeps track of your Conceivable Potential (the measure of how close the user is to their personalized optimal fertility self). By keeping track of the information, the Conceivable Software Program is able to track the users Fertility Profile in real-time and suggest improvements to the user of the symptoms that constitute any Conceivable Hurdles that reflect the changes that they are making and that are working. Including the herbal formulas they are taking. The optimum goal to make the correct changes to reduce the presence of any hurdles, shown above, or any other issues, so that the user can achieve their Maximum fecundity.

[0226] Herbal Formulas for Infertility.

[0227] One key to the present invention is the ability to assess the user's health through the Conceivable Software Program and then utilize the assessment data to provide input to the user the can make a measurable change in the users health. Once the user's individual input and calculations are completed with the Conceivable Software Program, Conceivable provides the best personalized diet, lifestyle coaching, and herbal mixture for the user particular conditions or hurdles.

[0228] The specifically designed personalized herbal mixture is for users dealing with infertility. The herbs are specifically formulated to address issues like irregular BBT, weak menstrual cycles, irregular ovulation, and painful periods, all of which can be key contributors to infertility.

[0229] A Customizable Software Program for Non-Fertility Issues.

[0230] In some embodiments, the Conceivable Software Program may be modified or customized for non-fertility wellness. For example, the software program may be a customized, actionable lifestyle modification program for the purpose of improving medical outlook or prognosis, or maintaining wellness, not necessarily improving fertility. The software program could be modified to deal with other issues using herbs, such as diabetes, weight loss, lung dysfunction, kidney dysfunction, cardiovascular dysfunction, weight gain or other dysfunctions, etc. Below is a non-fertility example of the software program.

[0231] Non-Fertility Example of Using the Software Program

[0232] The Conceivable Software Program includes many different settings to help or remind the user to do different things to enter important information into the software program. While the normal Conceivable Software Program is used for fertility, the software program may also be modified or customized to help the user alter or change their lifestyle to improving medical outlook or prognosis, or maintaining wellness. For example, the modified or customized Software Program may decrease an individual's risk of developing, for example, Type II Diabetes, lung dysfunction, kidney dysfunction, cardiovascular dysfunction, weight gain or other dysfunctions. One objective of the Software Program is to improve the health of the user through the use of information and herbs. The Software Program may also be tailored to a

certain group of individuals, e.g., a group of individuals who are at an elevated risk for Type II Diabetes or who have an elevated risk of high blood pressure or cardiovascular dysfunction.

[0233] After the information is entered, the software program may make suggestions on how the user can make actionable lifestyle modifications and select/recommend herbs to make the changes. Below is an example of information that may be input into the Software Program that might be used to help a user with other lifestyle issues.

[0234] A) Daily Recording to the Software Program

[0235] Sleep—"How many hours of sleep did you get last night?: 3-8+"

[0236] Water—"How many 8 oz glasses of water did you drink today?: 1-8+"

[0237] Veggies—"How many servings of veggies did you eat today?: 1-8+"

[0238] Digestion—"What are you experiencing most?"

[0239] Bloating

[0240] Gas

[0241] Nausea

[0242] Heartburn

[0243] Stomach ache

[0244] It's good!

[0245] Energy—"Rate the amount of energy you have: 1-5"

[0246] Stress—"Rate the amount of stress you are experiencing: 1-5"

[0247] B) Herbs

[0248] "Check your bottle for dosage, or contact your practitioner with any questions. Check Morning, Noon and Night."

[0249] C) Profile

[0250] Elimination—"What do you experience most in elimination?"

[0251] Loose Stool

[0252] Regular/formed

[0253] Constipated

[0254] Sleep—"How's your sleep been?"

[0255] trouble falling asleep

[0256] pretty good

[0257] trouble staying asleep.

[0258] Mood—"What mood has been the most prevalent for you?"

[0259] Irritable/Angry

[0260] Anxious

[0261] Depressed

[0262] Happy/Joy

[0263] Worried

[0264] N/A

[0265] Weight gain/loss?

[0266] What are you eating

[0267] How much are you eating

[0268] Weight fluctuation

[0269] The Software Program may also include different alarms (that can be turned on and off) to give the user reminders. For example the software program may include:

[0270] Herb Reminder

[0271] Morning (user may set the reminder time)

[0272] Afternoon (user may set the reminder time)

[0273] Evening (user may set the reminder time)

[0274] Tracking Information, such as discussed above (user may set the reminder time)

[0275] The Software Program may also provide educational information for the user to help educate them on different medical problems that the Software Program may think is happening to them from the information they have input into the program. For example, through the information input, the Software Program provide educational information on:

[0276] Diabetes

[0277] Lung Dysfunction

[0278] Kidney Dysfunction

[0279] Cardiovascular Dysfunction

[0280] High Blood Pressure

[0281] Weight Gain

[0282] Other Dysfunctions From The Information Entered

[0283] It is believed that the construction, operation and advantages of this invention will be apparent to those skilled in the art. It is to be understood that the present disclosure is illustrative only and that changes, variations, substitutions, modifications and equivalents will be readily apparent to one skilled in the art and that such may be made without departing from the spirit of the invention.

[0284] It is intended that the specification and examples be considered as exemplary only, with a true scope and spirit of the invention being indicated by the following claims. In addition, where this application has listed the steps of a method or procedure in a specific order, it may be possible, or even expedient in certain circumstances, to change the order in which some steps are performed, and it is intended that the particular steps of the method or procedure claims set forth herebelow not be construed as being order-specific unless such order specificity is expressly stated in the claim.

[0285] Various embodiments of the invention have been presented in a range format. It should be understood that the description in range format is merely for convenience and brevity and should not be construed as an inflexible limitation on the scope of the invention. The ranges disclosed herein encompass any and all overlap, sub-ranges, and combinations thereof, as well as individual numerical values within that range. Language such as "up to," "at least," "greater than," "less than," "between," and the like includes the number recited. Numbers preceded by a term such as "about" or "approximately" include the recited numbers.

The invention claimed is:

1. A method of increasing a users chances of conception using personalized herbal formulas, comprising:
 assessing a user's personalized fertility state;
 determining the deviation from the user's personalized fertility state and an ideal fertility state;
 identify a user's underlying fertility issues based on the deviation from the ideal fertility state;
 comparing the underlying fertility issues with herbal formulas capable of moving the user's personalized fertility state toward the ideal fertility state; and
 providing personalized herbal formula recommendations for the user to take to move the user's personalized fertility state toward the ideal fertility state.

2. The method of claim 1, wherein assessing the user's personalized fertility state includes collecting data on menstrual parameters, lifestyle factors, and Basal body temperatures ("BBT's").

3. The method of claim 2, wherein collecting data may include, but is not necessarily limited to, high, low, or erratic BBT across the menstrual cycle, menstrual clotting, menstrual pain, insufficient menstrual flow, hemorrhagic men-

strual flow, insufficient cervical discharge, irregular ovulation, symptoms associated with PMS such as bloating, irritability, headaches, breast tenderness, and cramping, and spotting.

4. The method of claim 2, wherein collecting data may identify subclinical factors and their causes that affect a user's personalized fertility state the user's ability to conceive.

5. The method of claim 4, further comprising assigning the user a "Hurdle" or "Hurdles" of one or more symptoms that represents an underlying cause for the subclinical factors, wherein Hurdles and their main associated symptoms are selected from the group consisting of:

- a) Hot—high follicular phase basal body temperatures, scanty cervical discharge, insomnia (harder to stay asleep);
- b) Cold—low luteal phase basal body temperatures, cold hands and feet, frequent urination;
- c) Stuck—PMS, erratic temperatures across the cycle, irritability;
- d) Pale—scanty menstrual blood, anxiety, pale skin; and
- e) Tired—fatigue, gas and bloating, loose stools, weight gain or retention.

6. The method of claim 5, wherein after the Hurdle or Hurdles are assigned, the personalized herbal formula recommendations for the user are recommended according to phases of a menstrual cycle to support fertility wellness, wherein the goal for the phases are selected from the group consisting of:

- a) Bleeding—Remove old, clotty, or stale uterine lining through menstrual bleeding, decrease menstrual pain, improve uterine blood flow, support production of a healthy amount of uterine bleeding;
- b) Follicular—Regulate BBT, build a healthy and sufficient new uterine lining, regulate ovulation, promote a healthy environment for follicular development and egg maturation; and
- c) Luteal—Regulate BBT, enhance progesterone function, stabilize uterine lining, maintain pregnancy.

7. The method of claim 6, wherein once the goal is completed, the method makes personalized herbal formula recommendations to address the underlying fertility issues.

8. The method of claim 1, further comprising a software program to perform the method, including:

- assessing a user's personalized fertility state;
- determining the deviation from the user's personalized fertility state and an ideal fertility state;
- identify a user's underlying fertility issues based on the deviation from the ideal fertility state;
- comparing the underlying fertility issues with herbal formulas capable of moving the user's personalized fertility state toward the ideal fertility state; and
- providing personalized herbal formula recommendations for the user to take to move the user's personalized fertility state toward the ideal fertility state.

9. The method of claim 1, further comprising providing the user with fertility acupuncture care and/or other complementary, alternative, holistic, or allopathic fertility care and/or wellness providers and/or clinics specifically designed according to the users underlying fertility issues.

10. An herbal system of actionable changes to move a user's personalized fertility state toward an ideal fertility state cycle using herbs exclusively selected for user, comprising:

- identification of the user's personalized fertility state, including menstrual cycle day and phase;

comparison between the user's personalized fertility state and the ideal fertility state to determine a deviation between them;

identification of one or more herbal formulas based on the deviation to provide actionable changes corresponding to the user's menstrual cycle day and phase; and

recommend the one or more personalized herbal formulas to move the user's personalized fertility state toward the ideal fertility cycle.

11. The system of claim 10, wherein the user's menstrual cycle phases are selected from the group consisting of:

- a) Bleeding—Remove old, clotty, or stale uterine lining through menstrual bleeding, decrease menstrual pain, improve uterine blood flow, support production of a healthy amount of uterine bleeding;
- b) Follicular—Regulate BBT, build a healthy and sufficient new uterine lining, regulate ovulation, promote a healthy environment for follicular development and egg maturation; and
- c) Luteal—Regulate BBT, enhance progesterone function, stabilize uterine lining, maintain pregnancy.

12. The system of claim 11, wherein the one or more herbal formulas may include:

- a) For Bleeding, the formula may be:
 - Release—Builds blood and resolves blood stasis in the lower jiao.
- b) For Follicular, the formula may be:
 - Enrich—Builds blood and resolves blood stasis in the lower jiao.
 - Cool—Nourishes Liver blood and Kidney yin, generates fluids and strongly clears heat.
 - Regulate—Nourishes yin and blood to regulate liver qi.
 - Energize—Tonifies Spleen qi and drains damp.
- c) For Luteal, the formula may be:
 - Warm—Warms the Kidney yang and tonifies Spleen qi.
 - Lift—Rescues prolapsed qi and tonifies Spleen.
 - Unwind—Tonifies Spleen qi and Liver blood to regulate Liver qi.

13. The system of claim 10, further including a software program configured to:

- receive a user's personalized data;
- calculate the user's personalized fertility state;
- determine a deviation between user's personalized fertility state and the ideal fertility state;
- identification of one or more herbal formulas based on the deviation to provide actionable changes for the users personalized fertility state; and
- recommend the one or more personalized herbal formulas to move the user's personalized fertility state toward the ideal fertility cycle

14. A software program using fertility metrics to assist a user to reach their optimal fecundity with the use of herbal formulas, comprising:

- record a variety of user fertility metrics scores;
- enter the fertility metrics scores into the software program;
- an electronic device having a processor configured to run the software program to process the user's fertility metrics scores;
- calculate a potential fertility metrics score with the software program on how close the user is to their optimal fecundability; and
- recommend herbal formulas by the software program based on the calculated potential fertility metrics to increase their optimal fecundability.

15. The software program of claim 14, wherein the user fertility metrics scores are selected from the group consisting of: Cycle Health scores, Basal Body Temperature (“BBT”) scores, Profile scores and Lifestyle scores.

16. The software program of claim 14, wherein the user would enter Cycle Health Scores selected from the group consisting of: Length of period, Days Bleeding, blood Color, Clotting, Volume, Cramping, PMS and Cervical Fluid.

17. The software program of claim 14, wherein the user would enter BBT Scores selected from the group consisting of: Volatility, Average Follicular Temp, Average Luteal Temp, Follicular Length and Luteal Length.

18. The software program of claim 14, wherein the user would enter Profile Scores selected from the group consisting of: Hot, Cold, Stuck, Pale, Tired, Energy, Digestion, Elimination, Sleep Quality and Mood.

19. The software program of claim 14, wherein the user would enter Lifestyle Scores selected from the group consisting of: Herbs, Sleep, Hydration and Diet.

20. The software program of claim 14, wherein the software program is configured to track the users fertility metrics in real-time and suggest improvements or changes that they are making and that are working, including the herbal formulas they are taking.

21. A software program to assist a user in actionable lifestyle modifications for the purpose of improving medical outlook or prognosis, or maintaining wellness, the software including:

tracking a user’s personalized data;

creating a user’s action plan based on the personalized data; and

recommending one or more personalized herbal formulas based on the user’s action plan.

22. The system of claim 21, further including providing the user with a current level of the user’s wellness after receiving the user’s personalized data.

23. The system of claim 22, wherein the user’s wellness may include diabetes, weight gain, lung dysfunction, kidney dysfunction, cardiovascular dysfunction, high blood pressure, and other dysfunctions from the information entered.

24. The system of claim 21, further including a reminder module to generate automated reminders of planned actions.

25. The system of claim 21, wherein the software allows the user to view the action plan progress.

26. The system of claim 21, further including educational information based on the action plan.
